Reignwood Park

LOOK INSIDE OUR INDOOR SPORTS COMPLEX

Housing an Aquatic Center with 25m & 50m pools, 1000-seat Sports Arena, Golf Development Academy, Fitness Center with indoor running track and fully equipped Gymnastics Hall. Our programs are designed to allow as many children as possible to compete, whether they are experienced or at a beginner's level.

LOOK INSIDE OUR EARLY YEARS CENTER

Bright and spacious classrooms are enhanced by additional facilities, including an art atelier, library, indoor soft play area, cooking studio and an Early Years Café for lunchtime gatherings. Learning environments extend beyond the classroom, encompassing extensive Early Years playgrounds that encourage active play and a dedicated learn-to-swim pool.

LOOK INSIDE OUR PRIMARY SCHOOL

Discovery labs, art ateliers, libraries, world language suites, a cooking studio and Primary Café for lunchtimes, complement spacious classrooms in our Primary School. Outside children can enjoy extensive adventure playgrounds for stimulating playtimes, a grass sports field and covered sports pitch for Physical Education and our Kitchen Learning Garden.

LOOK INSIDE OUR SECONDARY SCHOOL

Students enjoy two dedicated four-story buildings including an Arts and Science block featuring studios and workshop spaces for design technology, visual arts, photography, videography and a black box theater for drama and performing arts. The building also offers laboratories with specialized spaces for environmental science, biology, chemistry, physics and robotics.

CREATE YOUR FUTURE

The best stories you have from school aren't always written in the classroom. It maybe playtime with friends or exploring the school. Much of the curriculum at St Andrews Bangkok is delivered in ways that encourage discovery, multi-sensory exploration and role-play. We follow your child's interests and provide them with flexible learning opportunities across all areas of development.

Schedule a school visit with our friendly Admissions Team today and receive a personalised admissions experience.

EDITOR'S LETTER

Dear Parents,

Welcome to the BKK Kids 2024 International Schools Guide - our 10th anniversary edition!

We couldn't be more proud of our evolution over the past 10 years: from a small informal, parent information chat group into the best educational guide and child-friendly activity information resource in Thailand.

Staying focused on how to "make it easier for you to raise kids in Thailand," we have increased our reach of information to schools beyond Bangkok. We've launched our Northern sister site chiangmaikids.com and will add phuketkids.com to our network early next year.

An international school education is increasingly valuable in our rapidly changing and hyper-connected world. Here in Bangkok, and across Thailand, we are spoiled for choice, with a large number of schools providing early years to secondary education under a diverse array of programmes and curricula.

International schools offer local and expatriate children endless opportunities by adopting specific styles of curriculum, each infused with global context and diverse multicultural learning environments. International schools are more than where we send our children to read and write, they are places to explore the world, consider new perspectives, grow as individuals and become true global citizens.

With the emergence of more high quality international schools in the provinces around Bangkok, we continue to expand our reach to include schools from Chiang Mai and Phuket.

We take great care in creating our annual guide for those of you seeking to make educational decisions for your children now, or in the future. With this in mind we host a virtual school's fair every March which takes a deeper and more comprehensive look at some of the top schools featured in this guide. This event is specifically designed for parents to be able to access a more personalised experience that can assist them in making a shortlist or decision on a school. The event is especially relevant to those of you who will anticipate relocation to Bangkok.

Beyond the directory, our editorial section covers a variety of topics relevant to your decision making about your children's education. We have also continued our focus on learning support and mental health resources recognising that not every student fits into a mainstream education model or teaching method.

Another valuable resource we've developed is our Activities & Camps guide. Similar to our schools guide, the Activities & Camps guide is packed with a comprehensive list of family friendly activities and kids camps, for half term holiday and summer fun. This is updated annually and published every June ahead of the school holidays.

Please remember to visit our site www.bkkkids.com or www.chiangmaikids.com and sign up for our free weekly newsletter to hear more about schools, services and the opportunity to win some great give-aways.

We sincerely hope that this publication will provide you with an easy to use, but powerful tool when considering your selection of an international school. Whether you are in Thailand for a short time or for the long haul, we wish you the best in your children's education!

BANGKOK PATANA SCHOOL CONGRATULATES BKK KIDS ON ITS 10 YEAR ANNIVERSARY

Courtesy of Bangkok Patana School

As BKK Kids, the online platform for parents and children in Bangkok, celebrates its 10th anniversary, we look back at how Bangkok Patana School, Thailand's oldest British international school, has been a loyal supporter and partner of this fabulous service since its inception. The founder of BKK Kids shared with us the vision of creating a dynamic, engaging and growing community for families in the Thai capital, and we were thrilled to exchange ideas and feedback. Over the years, BKK Kids has evolved into a trusted and valuable resource for parents and kids alike, while Bangkok Patana has continued to adapt and excel in another decade of its 66-year history.

What have we achieved in the past ten years? It has been a decade of royal visits, constant upgrades, and external recognition as a world leader in international school education. About ten years ago, we received the Prime Minister's Export Award for the second time, honouring our contribution to the Thai economy and society. We were also the first international school in the world to receive the Design Mark from the Design and Technology Association in the UK, recognising excellence in teaching Design Technology. More recently, we received the award again, showing a consistency in teaching excellence. The Ministry of Labour presented the school with an award for

Excellence in Health and Safety in 2016. We have also been listed for five years consecutively on the Spears List of 100 best private schools in the world – a list that is generated independently without the usual requirement of advertising or payment. Up until two years ago, we were the only Thailand school on this list.

The environment has always been a priority for us, and we have taken both small and large steps to make a difference. We became the first school in Thailand to install a large array of solar panels, producing 702KW of clean energy from the rooftops of three buildings. We continued to install more solar panels in the ensuing years, reducing our carbon footprint and saving costs. When it became evident that bad air quality would affect Thailand every year for longer periods, we took swift action and installed pre-cooled fresh-air filters

in every building, ensuring the health and well-being of our students, staff and visitors. This was again, a first for a school at this scale and now many other existing and new schools have followed our example.

In 2017, we were proud to have a student and a staff member represent the school in an expedition to Antarctica under Bangkok Patana 2041, a campaign to raise awareness on a treaty that prevents drilling for oil and other natural resources in the environmentally sensitive Antarctic regions. They shared their experiences and insights with the whole school community, inspiring us to take action for the planet.

In the last ten years, we have also seen the opening of our Science Centre, a state-of-the-art facility where all classrooms are labs, specialised for biology, chemistry, environmental science or physics. The renovation of our Foundation Stage and the opening of the new Nursery building gave our teachers fabulous tools such as child-sized kitchens to engage students in their learning.

The pandemic brought about many challenges and hardships, and we missed the social aspects of the Bangkok Patana community. However, the community rallied and our 'at home' learning platform was recognised as one of the best in Bangkok. Our enrolment remained stable and slightly increased, reflecting the trust and confidence that parents have in our school.

We have emerged from the pandemic with a community that is resilient and stronger than ever. In June 2022, after 15 years of service, our Head of School Matt Mills retired. Our new Head, Chris Sammons, stepped into a vibrant community and has been warmly welcomed. We are embarking on another ten-year capital development plan, our student body is still the most diverse in Thailand, our parent body includes many of our very own alumni and Bangkok Patana School is ever more driven by its values of Well-Being, Learning and Global Citizenship.

THE VALUE OF AN INTERNATIONAL SCHOOL EDUCATION

By Casie Dorlick

The choice of an international school in Bangkok has never been as vast or varied and the number of parents selecting an international education for their children continues to grow. As our global community becomes more entwined and the need for critical thinking outside of the standard educational box assumes an important focus, more families are looking towards international schools. In a world embracing diverse cultures and emerging technology, it's important for students to have the necessary skills to collaborate and innovate.

International schools are home to children of both local and many nationalities and offer greater exposure to different cultures. They provide a classroom environment that facilitates cross cultural sharing and gives students more opportunity to develop, adapt and become more versatile learners.

For transient expatriate families, international schools offer many advantages including minimising the disruption to student's education and providing similar educational environments. Classes in international schools are usually taught in English with academic results being recognised by universities worldwide. Some schools provide boarding facilities, where others operate as day schools and many have pre-school programmes attached.

Among Bangkok's international schools, there are several main educational programmes available, namely, the American/Advanced Placement (AP); British/A Level; and International Baccalaureate (IB). All are internationally recognised qualifications for major universities anywhere in the world. Individual national curricula, such as Singaporean, Australian, Canadian, French and German systems, are also available within the city in fewer numbers but with equal benefit and value.

The choice of schools include both non-profit and private schools run by independent organisations and global education groups. Irrespective of the individual structure, they all offer curriculums focused on the progression and development of learning, from early years to pre-university levels. In many cases across Bangkok, schools offer a combination of curricula in the secondary/high school years. This provides favourable circumstances for different educational pathways and a wider choice for further education.

All schools focus on local culture and values as well as authentic experiences related to the developing world. Such schools are balancing academics with performing and creative arts, music, STEM education, a wide selection of sports, and offer students a varied and comprehensive learning pathway. We explore each of the major curricula and their attributes in greater detail below.

AMERICAN CURRICULUM

The common themes of enquiry-based learning and student-centred learning and planning underpin the American curriculum. A typical American international school starts with entry to Kindergarten at age 5 (or a nursery programme for younger children), usually with an age cut-off in the fall, around August to September. Students study through to Grade 12; upon completion, they earn a High School Diploma, which is accepted criteria for entrance by American universities and colleges as well as institutions of higher learning across the world.

This education system encompasses core subject matter standards and learning indicators recognised by one of six education accreditation departments in the US, including the Western Association of Schools and Colleges (WASC) and New England Association of Schools and Colleges (NEASC). To gain accreditation, the school's curriculum must be in line with the standards determined by the organisation. This course of study is bolstered by a wide range of co-curricular and after school activities, from music to sports, volunteering in the community and more, with the goal of equipping students with the skills they need for the 21st century.

Standardised tests are used as evidence of learning for students enrolled in American international schools around the world. Many universities internationally require students to take the SAT or ACT for consideration during the university admissions process.

High school students may enrol in Advanced Placement (AP) courses, which are offered by several schools in Bangkok. A programme created by the College Board over 60 years ago, AP courses offer college-level curricula and examinations to high school students in a wide variety of content areas. The benefits are to challenge students in a rigorous curriculum, strengthen their university applications, and offer the flexibility for students to select a variety of courses or focus on a specific subject in greater depth. Many American and international colleges and universities (including in the UK and Canada) may grant placement and course credit to students who obtain high scores on the AP examinations.

BRITISH CURRICULUM

A British education is based on the English or British National Curriculum. In Britain, it is compulsory for children between the ages of 5 and 16, with clear provision made for students, based on their ages, in specific developmental Key Stages. A defined curriculum accompanies each Key Stage, with clear assessments and examinations to monitor and track each child's progress. Each Key Stage encompasses core subjects, including English, mathematics, science and information technology, as well as foundation subjects in the humanities, creative and performing arts, modern languages and physical education.

Students study the International version of the General Certificate of Secondary Education (IGCSE) over the two years of Key Stage 4, from the age of 14 to 16. This includes core and elective subjects. Upon completion of Key Stage 4, students sit for the IGCSE examinations, a formal assessment of the child's attainment of his or her compulsory education. Students planning to attend university continue onto Key Stage 5 to complete two years of advanced courses, comprised of A Level courses and/or the IB in Years 12 and 13.

Established over 50 years ago, the A Level programme has been the primary qualification for further education in the United Kingdom, a tried and tested model, often referred to as the "Gold Standard" by global universities. An A Level programme offers depth and breadth through a challenging and academic learning path. Typically, students choose three or four subjects in their first year of study [Y12 in the UK curriculum] before narrowing to three in the second year [Y13]. Students focus on subjects where their abilities, passions and strengths lie.

It is also worth noting that other curricula from Commonwealth nations, such as the Singaporean curriculum, offer their students the IGCSE and A Levels in addition to their own combination of core and elective subjects. Core subjects include English, Chinese, mathematics, combined humanities and science. Like other systems, these ensure that students experience a broad-based and balanced education while the electives cater to a range of interests and abilities.

IB PROGRAMMES AND IB WORLD SCHOOLS

The IB system is becoming a prevalent choice internationally, with the hope that IB students, in the words of the International Baccalaureate Organisation (IBO), will become active, compassionate lifelong learners who "help to build a better world through intercultural understanding and respect". There are three IB programmes for students aged 3 to 18 years, including the IB Primary Years Programme or PYP (ages 3 to 11); the IB Middle Years Programme or MYP (ages 11 to 16); and the IB Diploma Programme (ages 16 to 18) or IB Career Path (16 to 19).

IB World Schools may offer one, two or all three IB programmes. For example, an IB World School may provide primary or secondary education according to a national curriculum (American, British, etc.) but only offer the IB Diploma for its pre-university students. Some international schools may also offer IB courses alongside A Levels and AP classes.

The IB programme promotes hands-on learning through all of its stages, from the early years to secondary school. For older students, projects help tie into different subjects and encourage students to explore their own interests. Also, other components of the curriculum include Theory of Knowledge (TOK), designed to encourage secondary students to reflect on the acquisition of knowledge; an extended essay; and creativity, action and service (CAS), which affords the opportunity to learn from experience by engaging in real tasks.

Along with cognitive development, IB programmes address students' role in local and global communities. Study of a foreign language is required to complete the course. Secondary school students may choose to pursue the full IB Diploma, individual IB courses, or a combination of IB and regular courses offered by the school. Each course of study can be chosen purely down to the academic goals of the individual student. Like the AP, taking IB courses is a means of challenging students while adding credentials and enhancing the quality of learning to their overall academic portfolio.

When considering the various curricula, first consider the abilities, needs and potential university plans of the individual student in order to create maximum benefit. The combination of curricula certainly offers more varied learning – and a challenging education to those wishing to take that path. On a broader level, the high academic standards and co-curricular activities offered by international schools enrich students with a global outlook and skill set that will prepare them for the future.

HOW THE IB CURRICULUM SETS YOUR CHILD UP FOR SUCCESS

Courtesy of KIS International School

The International Baccalaureate (IB) has earned a reputation for its rigorous academic curriculum, but what truly sets IB apart is its holistic approach to education, deeply rooted in the IB Learner Profile. This profile encompasses qualities such as being knowledgeable, caring, inquisitive, and principled. The IB curriculum, guided by the Learner Profile, not only prepares students for academic success but also equips them with the values and skills needed to thrive in higher education and life.

The IB's rigorous curriculum promotes deep subject exploration, setting a strong foundation for university studies.

IB emphasizes critical thinking and research skills through projects like the Extended Essay, preparing students for university-level research and analysis.

IB's focus on languages and global perspectives equips students with a multicultural outlook, valuable in an interconnected world.

The Creativity, Activity, and Service (CAS) component fosters compassion and social responsibility, instilling a lifelong commitment to giving back.

IB challenges students, promoting adaptability and resilience, vital skills for university and beyond.

IB encourages students to address real-world issues, preparing them to tackle complex challenges and make a meaningful impact in society.

While joining the IB program at any grade level is a valuable opportunity, experiencing the full continuum allows students to benefit from a seamless and integrated educational journey that nurtures holistic development, global perspectives, and a strong sense of purpose. It's like building a sturdy house from the ground up, with each level reinforcing the next, ultimately creating a well-rounded and empowered individual ready to excel in university and make a positive impact in the world.

KIS International School is the only school in Bangkok to offer all four IB programs:

- **The Primary Years Programme (PYP)**
- **The Middle Years Programme (MYP)**
- **The Diploma Programme (DP)**
- **The Career-related Programme (CP)**

While it's important to recognize that different curricula suit different students, the International Baccalaureate program stands out for its comprehensive approach to education. By offering a combination of academic rigor, critical thinking skills, global perspective, and a commitment to service, IB prepares students not only for success in university but also for a well-rounded and fulfilling life beyond academia. While it may not be the only path to success, the IB program unquestionably equips students with the tools and mindset needed to excel in an increasingly competitive and interconnected world.

KIS International School, 25 years of Inspiring Individuals through IB

KIS International School, located in central Bangkok, boasts over 25 years of experience in delivering outstanding academic education. We are a vibrant and diverse community of over 800 students, spanning from Early Years to Grade 12.

Excitingly, we are on the verge of a significant expansion as we prepare to become "One school, Two campuses" with the inauguration of our second campus in Lam Luk Ka, Pathum Thani at Reignwood Park in August 2024.

KIS educational approach empowers students to cultivate a wide array of essential skills, including critical and creative thinking, effective problem-solving, thoughtful reflection, proficient communication, adept social interactions, seamless collaboration, self-directed management, intrinsic motivation, unwavering resilience, emotional intelligence, and adept time management.

These competencies not only facilitate lifelong learning but also equip our students to become the trailblazing innovators of tomorrow.

Inspiring Alumni

Aey, Viabus Co-Founder

Jemma, Medical student

Inspiring Head of School

**Dr. Carolyn Mason Parker,
KIS Bangkok Head of School**

Viabus was featured on Forbes 30 under 30 Asia for best consumer technology in Asia. Aey, class of 2013, recently implemented this technology on the KIS campus to support our community and improve the journey to/from KIS International School Bangkok.

Jemma's interest for the medical space started in the Early Years at KIS. In Grade 1, her passion for biology was ignited with a school production about the human body. Today she is studying medicine at the Wrexham University in Wales.

"I am eager to collaborate with a diverse and talented team of educators to create a nurturing and engaging learning environment. Together, we will foster a culture of excellence and empower students to become lifelong learners and global citizens. With a passion for educational innovation and a commitment to fostering inclusive practices, I am dedicated to ensuring every student's success and well-being."

KIS International School Bangkok has graduated students since 2010. In 2023, KIS graduates received a collective 172 offers from 103 universities in 15 countries around the world, including: NYU, Berkeley, Johns Hopkins, Imperial College London, University of Manchester, and Singapore NUS. KIS reputation for academic excellence is supported by our consistently high IBDP scores which have seen us average 34.5 points over the last 5 years, well above the world average of 30 points.

To learn more about KIS International School, please visit kis.ac.th or contact our admissions office at: admissionsbkk@kis.ac.th and 02-2274-3444

BEYOND THE SCARES: THE TRANSFORMATIVE POWER OF SOCIAL GLUE IN BUILDING COMMUNITY

Courtesy of Stephen Hurworth, Deputy Head of Secondary, Bangkok Prep

Who would have thought that a haunted house in a black box theatre could symbolise the strengthening of a school community's 'social glue'? Some people reading this might be wondering how a haunted house can strengthen bonds and what is social glue. Understanding a little history of our school and the organisation, creation and execution of this year's Halloween event, will help you fully understand its meaning and symbolisation.

Bangkok Prep's journey began in 2003, at our original location in Thonglor, but as our community flourished, expansion became inevitable. Six years ago, we inaugurated the Secondary Campus on Sukhumvit 77, evolving into one school with two campuses. This academic year marks a significant milestone as our Primary Campus, adjacent to the Secondary Campus, opens its doors, bringing us back together as one united school community. The Halloween event enabled and empowered our whole community to get together on the same campus for the first time in six years! The

spooktacular event wasn't without its challenges, but the dedication of our wonderful parent group, Friends of Bangkok Prep (FOBP), student leadership, and our staff body, was nothing less than inspirational. When a team unites to achieve a common vision, the outcome can truly be remarkable and surpass expectations greater than one could even imagine.

The success of this year's Halloween came down to the perseverance and purpose of a group of parents, student leaders, and with help from the staff. That group of people set out to provide an experience for young people that was like no other. This was their purpose and they stayed true to achieving their vision and their 'why' throughout. One should never underestimate the power of the positive triangular relationship between students, teachers and parents in all walks of school life. Add to that embedded, shared values, a clear vision and mission and it truly is the magic recipe and what defines 'social glue.'

Kiri, one of Bangkok Prep's Year 13 students who was instrumental in arranging this event, had this to say:

"I was given the opportunity to work with the Assistant Head of Performances, Art Prefects, the Student Action Team (SAT), and FOBP on this year's Haunted House that we have named "Land of Oz". Working with various teams, inevitably, requires a good level of teamwork and communication skills, as well as respect. Not only did I try to inspire the teams with my ideas, I had to have confidence in my thoughts to be able to communicate clearly with the different teams. Fortunately, everyone that I worked with on this huge Halloween event was very passionate, enthusiastic and willing to give up their time to

here at Bangkok Prep to make this academic year more exciting than ever for everyone in the community. I would like to take this opportunity to show my gratitude to everyone who has taken part in organising the Haunted House, and to everyone who has entered inside and gave back to us with the best reactions ever. It wouldn't have been so successful without your support!"

These opportunities can enrich our students' experiences at school and prepare them for life beyond academic study. No student needs a title or a badge to be a student leader: just the willingness to get involved and be an active member of the community.

make the Halloween event more enjoyable and memorable for other members of the community.

With the different talents that we all have, we were able to give ideas and support each other in different aspects of organising the Haunted House. We had the Art Prefects design the layout and decorations, and the SAT and FOBP worked on the decorations and operation of the Haunted House using the ideas that came from the Art Prefects. Communicating and collaborating with FOBP was a little bit of a challenge for me due to the language barrier. However, we were able to build a good relationship working on this project.

I learned that challenges like language barriers can easily be overcome by having patience and respect for one another to try to understand each other. And this is a vital skill to have especially in an international community like our school. I have been hearing a lot of positive feedback from many students, parents, and staff members, and I hope to work on more events like this in my last year

At Bangkok Prep, we pride ourselves on having a strong organisation culture that is built on a caring and supportive community. With our values at the core, our vision and mission at the forefront, and if Halloween is anything to go by, Bangkok Prep's 'social glue' is becoming stronger and stronger by the day.

IB DIPLOMA: A GLOBAL APPROACH TO EDUCATION

Courtesy of Concordian International School

IB PROGRAMMES

Primary Years Programme (PYP) 3-11

PYP uses a transdisciplinary Framework which provides students a curriculum that allows them to appreciate knowledge, conceptual understanding, skills and personal attributes as a connected whole. The PYP program allows students to explore 4 Units of inquiry per year in the early years and 6 units of inquiry in the primary years in both English and Chinese languages. Science, Social Studies, Personal Social Physical Education (PSPE), Language, Math are taught through Units of Inquiry. Music, Arts, ICT and Physical Education are taught as Single subjects.

A unit of inquiry is an in-depth exploration of a transdisciplinary theme, such as Who We Are, How the World Works, How We Organize Ourselves... etc. Students will inquire into a central idea and concepts by being guided by lines of inquiry and teacher questions. Through various learning engagements and ongoing assessment, students gain knowledge, skills and conceptual understandings. Students reflect on the significance of learning and take meaningful actions in their community and beyond, becoming competent lifelong learners.

Middle Years Programme (MYP) 11-16

The next five years prepares each student for not only the academic related subjects that continue in the global theme of PYP but also the extracurricular, self-developmental and emotional progression needed to enter early adulthood through learning and experience. The programme focuses on eight key areas, including language acquisition, language and literature, individuals and societies, sciences, mathematics, arts, physical and health education, and design. Each year has to also complete at least one collaboratively planned interdisciplinary unit that involves at least two subject groups as well as a long-term project of their choice.

Diploma Programme (DP) 16-18

The DP curriculum consists of six subject areas: three at Higher Level and three at Standard. Students choose one subject from each of five groups: language and literature, language acquisition (a second language), individuals and societies (geography, history, psychology), experimental sciences (biology, chemistry, physics), mathematics, and the arts (visual arts, theatre, music), and a sixth from any group.

Other components of the curriculum are Theory of Knowledge (TOK), which is designed to encourage students to reflect on the acquisition of knowledge; an extended essay; and creativity, action and service (CAS), which affords the opportunity to learn from experience by engaging in real tasks.

On the whole, the IB's emphasis on independence, creativity and well-being allows each child, adolescent and young adult to grow in the direction that best suits them.

Clearly, the demand for a global approach to education is growing. The necessity to inspire and support individual students to understand and fulfil their potential in an uncertain job market, competitive university career and internationally

connected world is imperative to ensuring that their future is the best it can be. Now more than ever, the education offered by the IB, either as an individual curriculum or as part of a combined learning programme, helps develop, engage and enthuse the work force and citizens of tomorrow.

Concordian International school is one of the schools that offer a full IB World programme as well as an English/Chinese immersion programme. Their English/Chinese language immersions programme is available from Pre-K to Grade 4. Curriculum activities are conducted in a language other than the student's mother tongue. Through immersion, students acquire literacy skills and academic content at the same time.

In Grade 5, students study English and Chinese language arts separately. English becomes the core language of instruction and Chinese is taught as an additional language up to advanced levels of language arts and literary appreciation throughout secondary school.

By immersing children from an early age in a language-rich environment, and through a content-based curriculum, Concordian International School greatly improves chances of acquiring near-native fluency and pronunciation. All of this is based on the International Baccalaureate curriculum framework, which focuses on "the total growth of the developing child, touching hearts as well as minds and encompassing social, physical, emotional and cultural needs in addition to academic development."

"The world needs not only well-educated and intelligent people, but the world also needs them to be courageous and compassionate. We need people who extend their hands to help others and stand up for the rights of all mankind."

Varnnee Chearavanont Ross
 Founding Director, Concordian International School.

LEARNING SUPPORT CENTERS & MENTAL HEALTH RESOURCES

Finding the right school for your child in Bangkok is difficult enough without having the extra challenge of trying to find a school that specialises in individual types of additional learning support.

For students with distinct learning needs, accessing the right type of support can make a lifetime of difference. Both early detection and intervention can make a neurodiverse child's development much easier and bring lasting improvements to their lives.

Inclusive education is schooling where all children, including those with disabilities and learning challenges are given the opportunity and support to learn together in the same classrooms. In Bangkok we are lucky enough to have schools that are embracing neurodiversity and offering specialised intensive learning departments.

Schools are recognising that some students may need extra assistance, guidance or support in order to better access a mainstream curriculum or in addition to their regular classes. More and more schools and students are learning that inclusivity is key to building empathy in early childhood development. Being accepting of others who have learning challenges fosters not only acceptance and tolerance but can make school a better experience for those who don't fit into a typical mould.

We now have a specific category in our schools' section on the main website which is dedicated to learning support resources. Here we feature schools with inclusive educational policies, speech specialists, early intervention centres and clinics that have adapted curriculums for students with unique learning difficulties.

If you know of an additional resource not listed here, please contact us directly as we are always interested in new ways to support the community.

WHAT DOES 'PERSONALISED LEARNING' MEAN FOR YOUR CHILD?

Courtesy of St Andrews International School Bangkok

'Personalised learning is a term often referred to in the world of education. Typically, schools use it to explain how teachers adapt their lessons or approach students to help them reach their potential. At St Andrews International School Bangkok, we think about personalisation from a more holistic perspective. For us, supporting students academically is crucial, but we achieve that through personalising their entire learning experience, not just their classroom teaching.

WE WILL BEGIN WITH AN EXAMPLE

On a Monday morning, every Primary School student will meet with their year group teacher and High School students will meet with their personal tutor. They will each have spent their weekends in different ways. Perhaps they have had a great time with their family and socialising with friends, or perhaps they haven't enjoyed their weekend quite as much. Of course, we hope every student comes into school feeling energised and positive, but we don't know that for certain and we won't assume it to be the case.

Everyone has an occasional down day, but if a student is experiencing some challenging circumstances outside of school on an ongoing basis, for example, then this might begin to affect how well they do their homework or how capable they are of concentrating in class. It is important that we know enough about the individual that we can notice if their classroom habits or behaviours change, and are familiar enough with them to address this in a supportive manner.

Equally, if a student comes into class and is hugely passionate about a hobby outside of school which they can't wait to tell their friends about, then it is really important that we know about this too and make the effort to talk to them about it.

Understanding what makes our students tick is the first step to really engaging them in the classroom and in their extra curricular activities outside of it.

WHAT THIS MEANS IN TERMS OF 'PERSONALISED LEARNING'

We try to understand what resonates with the individual, from their academic interests and

aspirations for the future to their hobbies and the extracurricular activities that excite them most. By learning about what is 'normal' for our students and how they usually behave in school, we can encourage them towards pathways which will help them thrive, but also offer them extra support if we notice they may need it. Every student is on a different learning journey and has a different set of circumstances influencing their progress. Academic outcomes are never linear, they naturally fluctuate, and by closely monitoring this journey, we can personalise our approach to keep things moving in a positive direction.

Knowing our students on an individual basis also gives us insight into the things that impact different year groups or social groups within them and shape our teaching in acknowledgement of that. For example, if use of social media is particularly prominent in a particular year group and we wish to address how to use it healthily, we might tailor some of our lessons for that year group, whilst other year groups will focus on issues or topics most relevant to them. It means that we are never simply teaching 'off the shelf' material, we are shaping our teaching to what matters to the individuals in that class.

Similarly, we appreciate that world issues will impact every individual differently. In the recent years, our students across the school have encountered challenges they will never have

experienced before. It would be unrealistic to expect that they will be unaffected by this, academically, emotionally and socially. Our relationship with our students and our history of speaking with them on an individual basis means we can recognise when there are issues like this which need to be addressed. We can open up the conversation and help students to process what is going on. We frequently incorporate topics around culture, world news and debate into our teaching so that our students feel supported through big conversations and can discuss them in a positive environment.

A Nord Anglia education at St Andrews Bangkok provides social and personal growth, with summer arts programmes, collaborations with Juilliard and MIT, sports, trips and extra-curricular activities allowing students to expand their creative, athletic and technical skillsets. Through our unique global educational offering, we help nurture talented students who can succeed anywhere.

To learn more about what is being studied in your child's year group and how our teachers help them to achieve their best, arrange a personalised school tour with our friendly Admissions Team today.

UNLOCKING YOUR CHILD'S LEARNING POTENTIAL WITH BRAINFIT® THAILAND

As parents and educators, we all want the best for our children. We envision a future filled with success in life and school, where our children develop a wide range of skills, including academic achievement and other essential skills. These include self-resilience and cognitive flexibility, which are vital not just for academic success but for success in life.

The BrainFit® Thailand Difference

With over two decades of experience, BrainFit® Thailand is a trusted name in the realm of brain fitness and cognitive development. Our mission is simple yet profound: to transform lives by enhancing learning capabilities, boosting academic performance, shaping positive behaviours, and increasing intelligence. We achieve these goals through high-quality, evidence-based neuroscientific cognitive training programs tailored for children aged 3 to 18.

A Holistic Approach to Cognitive Development

At BrainFit® Thailand, we take a holistic approach to cognitive development. For children aged 3 to 18, we offer whole brain training programs through three approaches:

- **Physical Training:** Our programs include physical exercises and activities that promote a healthy body, which in turn supports a healthy mind. These activities not only

enhance cognitive development but also contribute to improving fine and gross motor skills, benefiting children in their movement, sports, and overall confidence.

- **Cognitive Training:** Our cognitive training programs are rooted in the latest research in neuroscience. We offer a wide range of modules that enhance memory, focus, critical thinking, and problem-solving skills, tailored to specific age groups.
- **Emotional Coaching:** Emotional well-being is a vital component of cognitive development. We provide emotional coaching to help children manage stress, build resilience, and develop a positive mindset.

Programs for Language and Math Development

In addition to our core programs, BrainFit® Thailand also offers specialized programs for English and Math development tailored to children in K-12+ grade. These programs are designed to strengthen language and math skills, foster a love for these subjects, and enhance problem-solving abilities.

Who Can Benefit?

Our programs and services are designed to benefit a wide range of children, including:

- **Mainstream Students:** Children seeking to enhance their learning capabilities and excel academically.

- **Support Learning Kids:** Those who require additional support to overcome learning challenges and reach their full potential.
- **ADHD/ ADD:** Children with ADHD/ADD can benefit from our programs that improve focus, concentration, and time management.
- **Dyslexia:** We provide tailored interventions for children with dyslexia, addressing their unique challenges and helping them overcome reading difficulties.

Personalized Learning Approach

What sets BrainFit® Thailand apart is our commitment to personalization. We understand that no two children are alike. Our experienced team of educators, and professionals collaborates closely with each child to tailor the program to their specific needs and goals. We're dedicated to addressing the unique challenges each child faces and creating a customized plan to help them succeed.

CognitiveMAP Assessment Services

At BrainFit® Thailand, we offer cognitive assessment services for children aged 4 and above. These assessments provide valuable insights into your child's cognitive strengths and

areas that may require additional support. These assessments serve as a foundation for tailoring our programs to your child's specific needs and ensuring that their learning journey is optimized.

Proven Results

BrainFit® Thailand's programs are designed to deliver results. Participants consistently report remarkable improvements in their cognitive abilities, academic performance, and overall well-being. Our approach is not just based on theory; it's grounded in practical, tangible outcomes.

To explore our products and programs in more detail, please visit our website www.brainfit.co.th/en. There, you'll find comprehensive information about each of our programs, including Mainstream Language Development, Dyslexia Support, Math Development, Attention Issue Management, and our Cognitive Assessment Services. Additionally, you can discover testimonials from satisfied parents and students and access resources to help you make an informed decision.

Don't miss the opportunity to shape your child's future. Empower them today with BrainFit® Thailand - where learning meets potential. Our programs are designed to unlock your child's true potential, and we're here to support you every step of the way.

CHOOSING YOUR CHILD'S FIRST SCHOOL

There's increasing evidence about how early years education plays a crucial role in a child's success. But how do you make that first choice? In Bangkok we are lucky to have such a large and extensive variety of international schools and at first glance parents are often overwhelmed by the choice.

This will probably be one of the most important decisions as a parent you will ever make - no pressure! Your child's first school and introduction to a learning experience plays a significant role in their attitudes towards lifelong learning as well as helps to develop and shape their character.

As parents, we all want our children to have the best first school experience possible. However, many parents have no idea where to start in finding that 'perfect school' for their child. A good starting point is to think about what you want a school to do for your child and the approach to learning that will best suit your child's individual needs.

Remember that the skills your child learns outside of their home environment in terms of behaviour, social skills and early attitudes to academics are all cultivated during their early years' experience. It is therefore really important that you conduct some research on where to send your children to school.

Many factors need to be considered including language, location, cost, and the various programmes of curricula offered. In Bangkok there are an overwhelming number of choices and this can sometimes feel like a daunting task. To make things easier for you we have given you some considerations to help guide you through this important selection process.

In order to make choosing your child's first school easier, every year we host a virtual schools fair where you can hear directly from each school. You can participate in live Q&A sessions, watch virtual tours and avail of special promotions. Click [HERE](#) for American schools and [HERE](#) for British schools or simply scan the QR codes to access the 2023 recordings.

Scan here to view the 2023 virtual schools summit

American Schools

British Schools

IDENTIFY YOUR PRIORITIES

Identify your priorities in terms of a school near your home or office and how convenient this will be for travel. Moving around Bangkok can be a slow and frustrating journey which is why many families choose to live within close proximity to the school or choose a school with easy access to the public transportation network,

Next is the choice of specific curriculum, an IB world school, the British or American curriculum, do you need a school that offers a pre-school for younger children as well as the secondary years for siblings. Do you want to find a smaller kindergarten first before you make the decision on a larger school, there is no 'one size fits all' when it comes to choosing a school, every child is unique and flourishes in different ways. Think about what is a strong priority for your child, a more structured academic environment or a play based learning approach.

All school admission offices and web pages display a full list of yearly tuition fees so it's a good idea to check these in advance to suit your budget. They will also show the additional costs for extra requirements such as, ESL (English second language) classes and school bus transportation.

SHORTLIST YOUR SCHOOLS

Time to now make a shortlist of the schools that meet your individual needs. It's a good idea to speak to other people with children attending the schools, word of mouth is extremely helpful, and you will find families usually won't recommend a place unless they have had a positive experience. Albeit choosing a school is a very personal decision and sometimes you can make or break a connection during your actual visit.

VISIT THE SCHOOLS

Visiting the schools you select is an incredibly important part of the selection process and try to always visit during school hours. All schools will offer an accompanied tour of the schools' facilities, sports arenas and cafeterias. You may request to visit specific year level classrooms to get a better feel of the size and nature of the classes. Here you can observe the teacher to student ratio, if teaching assistants are present, look at samples of

class work and generally see if the students are engaged and happy. Some schools may even offer you the opportunity to have a trial class or attend open days where you can get a better feel for the environment and an opportunity to meet the teaching staff.

ASK QUESTIONS

A good idea is to come prepared with a list of questions for the school administrators, school hours, food choices, uniform requirements, and opportunities for creative play and extra-curricular activities. You may also request a meeting with the relevant heads of school to enquire into the school's mission statement and credentials for the school's faculty. Consider whether the school is accredited, what their child safeguarding policy is and what learning support or accelerated programmes they offer throughout the school. It's also a good idea to request a sample of the school calendar and for older students a sample of a school timetable to determine the duration and amount of classes per day. Find out what the schools policy is on the use of technology, mobile phones, their tolerance on bullying and for older students, what type of pastoral care do they have in place through school counselling and what guidance they offer for university applications.

APPLY TO SEVERAL SCHOOLS

Do apply to several schools in order to keep your options open. Some schools will have a wait list based on different factors, year level, nationality and if any extra learning support is required. The school admissions department will be able to determine if spaces are available immediately or the length of any waiting list. You can also periodically enquire if more spaces have become available and discuss options of joining in term 1 or 2 if the school is able to only accommodate you later in the academic year.

HOW TO USE THIS GUIDE

SCHOOL LISTINGS

The international schools listed in this guide are located in Bangkok and nearby suburbs and provinces. They offer programmes ranging from preschool to primary and secondary school levels. In most cases, English serves as the main language of instruction.

Schools are listed alphabetically. Each listing offers a school overview, and information on facilities, curriculum, average class size and contact details, among other data. Some schools chose not to submit information, and we have compiled their data from publically available sources.

TUITION AND OTHER FEES

Please note that many schools charge enrolment, assessment, application, registration and/or other fees that are not included in annual tuition. These fees can run over THB 300,000 in some cases. Also, some schools offer optional meal plans, transportation arrangements and extracurricular activities at an additional cost.

Some schools also charge campus development or capital fund fees that can be as high as THB 800,000. Parents are required to make this payment before enrolment; the funds are returned, without interest, when the child withdraws or graduates from the school.

The Apple Tree International Kindergarten

Welcome to the leading play-based kindergarten in Bangkok, providing education for children from 18 months to 5 years. Our philosophy at The Apple Tree International Kindergarten is based on a carefully constructed combination of the EYFS framework and the Reggio approach. Through observation, inquiry and exploration children discover the joy of acquiring knowledge and skills. Our early years educators are highly skilled at developing relationships with our children and understanding their intrinsic motivation to learn and support their personal, social and emotional development and empower them for primary school readiness.

'It takes a village to raise a child.'

BCIS was established on August 22, 1997. BCIS believes in the necessity of a strong Christian-based philosophy that supports academic programs, fosters the development of moral principles, and best prepares students to meet the challenges in an ever-changing world. BCIS' mission is to equip our students to live and serve effectively in our global community by teaching them to apply wisdom through the comprehension, appreciation, and evaluation of our world in light of God's inspired Word. Our vision is to provide a quality international education within a caring Christian environment, encouraging leadership and the development of lifelong learning skills.

We are committed to providing a well-rounded Christian education in a nurturing learning environment that guides each child to reach his optimum potential. We believe that education without character is not truly an education unless moral values are taught and practiced. We foster holistic child-centered activities which are developmentally appropriate and fun.

Our teachers are all professional and trained with MAs and Doctorate degrees, have an undeniable love for children and teaching, and are constantly updated with the newest Educational trend and practices through training and professional development.

A WORLD OF OPPORTUNITY

To develop leadership skills, children need teachers who can instill within them the confidence to move to a different drum beat. Well-trained and experienced teachers guide our students to explore and challenge themselves. Our strong pastoral programme develops resilience and social attributes that will make children successful contributors to their global and local communities.

Give your child a

Bangkok Patana is a not-for-profit IB World School, accredited by CIS.

Bangkok Patana School (BPS)

Scan here to view a video presentation from the BKK Kids Virtual School Summit

The original British international school in Thailand; it embodies the best of British values with a modern outlook and a broad and balanced curriculum. From Nursery to Year 11, it links to the English National Curriculum with assessments taking place at key points. A truly international school with the most diverse student body in Thailand. Students complete their (I)GCSEs in Year 11 and then progress onto the IB Diploma Programme in Years 12 and 13. Bangkok Patana is an independent, not-for-profit school, accredited by CIS.

BASIS International School Bangkok

We're proud to contribute to the tradition of excellence shared by all BASIS Schools, one of putting student learning first and creating an environment of supportive collegiality between students, teachers, and administration. Education redefined rests on three pillars: First, a curriculum educating students to the highest international levels. Second, expert teachers who are knowledgeable, passionate, and believe that with the right support and encouragement, any child can excel. Third, a joyful learning culture where hard work is celebrated and intellectual pursuits result in extraordinary outcomes.

We specialise in Early Childhood education, catering for all ages 18 months to 6 years old. We have a low adult to child ratio, allowing our qualified and experienced teachers to provide individual education planners to meet the needs and develop the skills of each child in all areas of learning. We believe learning MUST be fun for all children and aim to promote self-confidence, independence, respect and a caring attitude towards others; a genuine love for play and for learning.

British Columbia International School's philosophy of education is to offer one of the best curriculums in the world to inspire the best in each child. Our students explore subjects they do not cram for exam based assessment. We believe learning happens everywhere, discovered through passion and curiosity. A balance between school and home with manageable homework and a personalized education is essential to produce happy, inquisitive students that are confident in their abilities. BCISB offers a quality education both inside and outside of the classroom with our extensive options in Extra Curricular Activities, to best prepare students for the future.

Brighton College Bangkok

Scan here to view a video presentation from the BKK Kids Virtual School Summit

In partnership with the UK's School of the Decade (as awarded by The Sunday Times), Brighton College Bangkok aspires to be the top British curriculum school in Asia. Open to boys and girls aged 2-18, we inspire academic excellence. Prospective parents and pupils are invited to visit our 50-rai campus in Krungthep Kreetha, to meet our leadership team and see the culture of kindness, curiosity and confidence that makes Brighton such a special place to learn. The school is particularly well known for its teaching expertise at every age level, and its outstanding examination results. In 2023, with 80% A*-A grades at A Level, and almost half of all grades at A* would have placed its results within the top three co-educational day schools in the UK. Pupils leave the school to study at the most selective universities in the UK, USA and around the world.

Bangkok Prep International School

Bangkok Prep is one of the leading international schools in Thailand and is currently celebrating its 20th year of success. The programme of study is based on the National Curriculum for England, demonstrating high quality education to students from Nursery to Year 13.

The school offers a rigorous IGCSE programme to Year 10 and Year 11 students as a precursor to A-Levels. A wide range of Oxford International, Cambridge International and other approved A-Levels are available to study in Year 12 and Year 13. BTEC is also on offer in combination with A-Levels or as a standalone curriculum to Sixth Form students.

CIST cultivates critical thinking, teamwork, and communication skills across all grade levels. Pre-K 3 to Grade 9 students develop as creative, globally-minded thinkers and lifelong learners within the IB (PYP and MYP) framework. Grades 10-12 follow the Ontario curriculum to deepen these skills. Teachers prioritize student-centered learning, crafting materials that blend curriculum with student interests.

Secondary students benefit from our International Exchange Program, gaining insights in Canada for a global perspective. CIST graduates choose qualifications—CIST Diploma for further studies in Thailand, OSSD for international universities, or BTEC for future entrepreneurs.

Crescent International School is an English language, coeducational, non-sectarian, university preparatory day school, providing high quality education. We offer the Edexcel International Curriculum, resulting in our students sitting for the AS/A level examinations. Our school's inclusive philosophy serves as the foundation of the programs at CIS. This philosophy fosters respect for the dignity and worth of each individual child, supports equal education and opportunity for all, and emphasizes a free exchange of ideas. We strive to help our students become global citizens with a lifelong love and respect for learning.

EARLY YEARS PROGRAM

PRIMARY SCHOOL PROGRAM

MIDDLE SCHOOL PROGRAM

In our Early Years Program, we focus on students' happiness, creativity, social skills, and self-help skills. Only when students feel safe and trusting in their environment will they be truly open to learning and exploring.

- Key Elements of the Early Years Program**
- US Curriculum & Reggio Emilia inspired pedagogy
 - Critical cognitive & language development
 - Social & emotional development & self-help skills
 - IB PYP Programme / 4 Learning Projects per year

In our Primary School Program, we help children discover new ideas and solutions to problems in our community and the world. We follow the US curriculum while promoting learning through inquiry.

- Key Elements of the Primary School Program**
- US Curriculum
 - Design Thinking
 - IB PYP Programme
 - SEL & Life Skills

Our Middle School Program ensures that all our students will develop a strong academic foundation and also flourish as creative problem solvers. Middle school students engage in extensive writing, research work, and real-life application in their learning expeditions.

- Key Elements of the Middle School Program**
- US Curriculum
 - Design Thinking
 - Life Skills
 - 2 Learning Expeditions
 - 1 week Outbound Trip

HIGH SCHOOL PROGRAM

The High School Program is a rigorous academic program linked to real-world applications and positive impact on the community and the world. High school students have choices of Advanced Placement courses, including the AP Capstone Diploma program which is designed to develop independent research, collaborative teamwork, and communication skills.

- Key Elements of the High School**
- US Curriculum
 - Work Internship
 - Pathway Programs (STEM, Entrepreneurship, Arts, Multidisciplinary)
 - AP Program/AP Capstone
 - Personal portfolio development

Established in 1984, ELC Family of International Schools believes that a child's joy of learning is the measure of our success.

We foster the growth of each child through an inquiry-based learning approach with a broad and rigorous international curriculum that seamlessly connects to programmes worldwide.

Intentionally designed for nurturing the growth of children from 18 months to 11 years, our inspiring campus environments support both teaching and learning, motivating our students to engage meaningfully with the work around them and reach their full potential.

Welcoming children from over 40 countries since 1991, our Purple Elephant at Samakee is designed for children from 18 months to 5 years of age, after which they continue to draw on the abundance of the rich experiences reaped during these early years. A community school, with a countrified ambience, and just like our early childhood centres in Bangkok, it has a limited enrollment and small class sizes, affording a cosy environment that yields the kind of intimacy that is so important at this young age.

The Purple Elephant 55 is located at the end of a quiet soi in Thonglor, and embodies the importance of relationships. Glass connecting the spaces inside and out, pays homage to the connectedness that reinforces the pedagogy of relationships. Meanwhile, the bamboo play structure enhances the beauty derived from using natural materials and reinforces the blending of old with new, creating a lovely ambience in this stunning environment.

Hampton International Pre-School, Sathorn Campus is located in the heart of Sathorn where our 'home away from home' is situated in an airy, leafy and beautiful green space. We proudly recognise that every child is unique and we celebrate this concept with each new child who comes through our door. Our educational approach gives our children the freedom to explore their world through discovery, experimentation, invention and creativity. As Hampton children travel through our programme, they gain independence, critical thinking skills, a growing sense of identity, an astonishing curiosity in the world and a positive attitude towards learning.

Phone (095) 193 2615 **Email** hummingbird@hummingbird.ac.th
Website www.hummingbird.ac.th/

At Hummingbird, children are encouraged to be independent and learn through the play following the Early Years Foundation Stage (EYFS) philosophy. Recognising that children develop more rapidly during the first seven years of their lives than at any other time, we foster high levels of interaction to promote language and communication skills, as well as creativity and critical thinking.

We also incorporate Executive Function skills into our curriculum: EFs are controlled by the frontal lobe of the brain which regulates the ability to think, study, solve problems independently, get along with others, and find happiness. These skills develop most during the formative years through positive learning and are vital in bringing out the best in each unique, well-adjusted child.

The First & Future Steps International School Bangkok

For 24 years, The First Steps International Preschool has been a prominent community-centred kindergarten for children aged 16 months to 4 years old. In 2024, we are proud to welcome you to our brand new purpose-built Primary School Campus, right in the heart of Sukhumvit. With outstanding facilities, fully qualified teachers and a close-knit, multi-cultural community, we look forward to welcoming your young family. Conveniently located in Sukhumvit 31 & 39. FSB follows the EYFS and British National Curriculum. We provide the best value for money when it comes to choosing an International School for children up to 11 years old within central Sukhumvit. With bilingual programmes for EY native French & German speakers, as well as 5 language options in Primary, we truly embrace multiculturalism & diversity at our school.

HEI Schools Bangkok Sukhumvit

HEI Schools Bangkok is the Finnish International Kindergarten to offer cutting edge early childhood education to students 1.5 to 6 years of age. The pedagogy and curriculum are designed based on Finland's Early Childhood Education and Care (ECEC) in combination with the latest educational research on early childhood education by the University of Helsinki (a co-founding partner). The HEI curriculum aims to enhance children's learning experience through Phenomenon-Based Education, active participation of all stakeholders, stimulation of curiosity and creativity, and play-based activities and exploration. Learning takes place everywhere and all the time at HEI Schools Bangkok.

IPC is a cosy nursery and kindergarten, one of the first International Kindergartens in Bangkok, established in 1983. Accepting students aged 18 months up to 6 years old, we are providing a nurturing environment to learn and grow.

Located in Sukhumvit soi 31, IPC embraces a family-oriented approach, fostering personal relationships with parents. We follow the British Curriculum, utilising a Play-Based approach for nursery classes and a Project-Based Learning approach for kindergarten classes.

At IPC, we believe in the notion that learning should be fun while incorporating academic aspects into our lesson plans to ensure a smooth transition for our students as they move on to Year 1 or Grade 1.

We invite you to join our kindergarten community, where your child will thrive in a nurturing, fun-filled environment, building a strong foundation for their educational journey.

International Community School (ICS)

ICS is a non-profit international Christian school (K4-G12) and the leading Advanced Placement (AP) institute in Bangkok. ICS students have one of the highest reported SAT average scores in Bangkok and achieve acceptance to top colleges and universities in the US, UK, and around the world. ICS is known for its close-knit community fostered among its faculty, students, and parents. Beyond academics, ICS students make life-long friends with students from 30+ different nations and are mentored and encouraged by engaging teachers. An emphasis on character, together with student achievement, is why ICS is one of the few international schools to see continual enrollment growth for over 30 years!

When the renaissance artist Michaelangelo created his masterpiece David sculpture, he started with a rough block of marble and chipped away at the stone that was not David, until the magnificent figure of David revealed himself from inside the block of stone.

The Ivy School is founded on principles of humanism. Our students are not fungible commodities, standardized to be compared by test scores. Every student has something unique to offer the world. Our teachers nurture every student, growing their curiosity into talent and developing that talent into passion.

Quality, Affordable International Education

Kensington International School

Kensington International School was founded by a passion to cultivate a lifelong love of learning to children, hoping to help them prepared for the challenging future. We were one of the first schools in Thailand to pioneer a full play-based learning approach in school and have a purpose-built facility, specifically designed to stimulate learning, curiosity and freedom to explore.

With over a decade of experience, we have become the expert in childhood education, with a profound understanding in the nature of children and professional, holistic child care. Kensington is now growing with our learners, and will have Primary Education in academic year 2024-2025, within our new, purpose-built premises, located just next to the current Kindergarten. We are now accepting applications for Primary level for the coming academic years.

We are passionate about offering world-class education to our students, using the American curriculum, with the aim of fulfilling the educational and developmental needs of each child. Starting from the age of 6 to 12 months, our mother and baby club follows the early years foundation stage, which provides a structure of learning and care. Our nursery and kindergarten programs for ages 1 to 6 years build on that foundation, with age-appropriate sensory stimulation, language development, brain developing activities and more.

Level of instruction	K Kindergarten
Age range of students	6 months to 6 years

International School Bangkok (ISB)

Scan here to view a video presentation from the BKK Kids Virtual School Summit

International School Bangkok (ISB), widely recognized as one of the world's leading international schools, was the first to be established in Thailand. Since 1951, ISB has proudly provided a high-quality international education to students from over a hundred nationalities and is the pioneer International Baccalaureate school in Thailand. ISB is a learning-focused, US-accredited, IB authorized, independent Pre-K to Grade 12 school offering a challenging international curriculum to a multicultural and multilingual student body of over 1,750 students. Learning at ISB is informed by leading educational research and global best practice, incorporated into North American and International Baccalaureate Diploma frameworks. ISB has long valued its globally-minded, inclusive and vibrant community and its strong culture of care. ISB is committed to encouraging students to follow their passions in academics, the arts, athletics, and many other areas both in and out of school. ISB maintains a constant focus on quality with respect to learning, faculty, leadership, professional development, and facilities.

Kids' Academy International School

Kids' Academy International School opened in 2003, providing high quality care and education for children aged 18 months to 11 years. Our purpose built campuses were designed to promote independence and exploration, are well-resourced and provide stimulating learning environments.

Our experienced UK qualified teachers are committed to building a love for learning through child-led, play-based and thematic activities in a natural environment. We place importance on building children's imagination and unique talents as part of their learning journey.

We offer intensive Japanese, Thai and Chinese Programmes and a wide variety of after-school activities.

We welcome you to visit us to find out why we are so well known and trusted in Bangkok.

KINDNESS TAKES YOU FURTHER

To prepare our students to go further in a fast-changing world, we believe that 'kindness' is as important as 'knowledge'. Our supportive environment and teaching infuses the school with this value. We foster kindness in our community so that students thrive and make a meaningful impact in this world.

Kids Virtual School Summit

We are the first King's College International School in Southeast Asia, and we aim to become one of the best schools in Asia. We are part of a tight-knit network of international schools founded by and connected to King's Wimbledon, the Top Boys' and Co-ed School in the UK by the Sunday Times (2017–2019, and 2022), and one of the most academically successful schools in the world. Our close relationship with King's Wimbledon and our other sister schools in China and Monaco allows us to leverage their expertise and experience to rapidly develop, and continuously improve the quality of education we provide, and help our students to excel in whatever path they may choose both in and out of school. Our strong academic curriculum, varied co-curricular programme and outstanding pastoral care are centred upon the values of good manners, kindness and wisdom.

International School

KIS International School is a welcoming and vibrant community. The lush campus sits on more than 25,000 square meters of land, spread across six buildings. Its distinguished architecture is home to over 800 students from 50 nationalities, all of whom are welcomed, valued, and respected. Students grow through experiential learning, whether that means composting and planting banana trees in the early years, swimming in one of three pools during PE, or delivering a business proposal in the DP program.

In 2022, KIS International School added the IB Career-related to its programme and became the first school to offer all four International Baccalaureate programmes (PYP, MYP, DP and CP) for students ages 3 -18. Our IB exam results are consistently strong, with students scoring well above the global average. This is thanks to a challenging, well-balanced and differentiated learning experience that students receive in our intentionally mid-sized school. KIS graduates go on to top universities around the world.

The critical thinking and problem solving skills they develop in the IB curriculum prepare them well for their academic and professional futures.

We would love to welcome you to our spacious, modern, and dynamic campus near the city center. Schedule your visit and see for yourself!

Melodies has been established since 1981 with the aim of fostering children's learning and development in a natural and nurturing environment. Melodies offers both English and Japanese programs for children, aged 1.6 to 6 years old. Children from both programs have opportunities to learn numbers, music, letters, physical education, arts and crafts through games, stories and other interesting activities. The children are encouraged to be independent, think creatively and have self-confidence and self-discipline. The curriculum in the English program is designed for children who learn English as a second language. Children enjoy learning at Melodies because we provide integrated learning activities through play and hands-on experience.

At KPIS International School, we're unwavering in our dedication to deliver a transformative education that goes beyond just academic excellence. We believe in equipping students with a spectrum of competencies like effective communication, critical thinking, creativity, computational insights, and global perspectives. By immersing them in rich experiences and focused mentorship, we cultivate their leadership potential and nurture their readiness for future challenges. Our commitment is resolute: to shape a community of forward-thinkers who excel academically, embrace innovation, and lead with integrity. In this robust and adaptive learning environment, students are emboldened to make meaningful contributions to both local and global communities, always remaining curious and driven in a rapidly evolving world.

Website www.misb.ac.th

MISB, established in 1997, is a private co-educational school providing International Education from Early Years to Year 13 within the framework of the National British Curriculum. Following the Curriculum, we have segmented our students into Early Years Foundation Stage (Nursery- Year 1), Primary (Year 2- Year 6), Secondary (Year 7- Year 11) and Sixth form (Year 12 and Year 13). The structured curriculum is designed to meet the needs of all students through differentiated teaching and learning activities. MISB is an inclusive school and offers an excellent educational experience, providing a range of opportunities for all students who come from diverse cultural and linguistic backgrounds. The school works with a mission and aim to provide a Holistic Education that encourages all the students to excel and evolve as lifelong learners in the global community.

MABIS offers students an authentic Montessori education delivered in a multilingual environment. Students learn English, Mandarin and Thai in our language immersion program serving children from two years old through High School.

Montessori education prepares children for life. The curriculum is designed with their developmental needs in mind. Children engage in real, hands-on experiences that support purposeful learning.

The Montessori Secondary program is a dynamic learning environment where adolescents perform meaningful work that simulates experiences in the adult world. In addition, students have the option to pursue Advanced Placement courses and examinations in High School.

Noddy by Elizabeth (British International Playgroup)

Noddy by Elizabeth, established in 1978, is a purpose-built pre-school located in a quiet cul-de-sac in a prime residential area of Bangkok (Yen-akart/Sathorn Road).

We provide a happy and purposeful environment for pre-school children (aged 18 months to 6 years) of all nationalities. Our goal is to help them adjust to a new environment away from home and parents for a short period each day, fostering the development of social skills within their peer groups.

All classes are conducted in English. We follow the **Early Years Foundation Stage (EYFS)**, a British curriculum with emphasis on the 'Free-Flow-Play' technique. Our approach aims to broaden their imagination, creativity, practical abilities and self confidence to be ready for their future at the "Big Schools"!

Learn Through Play

A loving, warm & caring community for early year children (18 months to 6 years old) since 1978

NIVA AMERICAN INTERNATIONAL SCHOOL
Established 1991

NURSERY & K-12 INTERNATIONAL SCHOOL

NOW Open for Admissions

Best choice I've made

NIVA American is a small-sized school where the teachers and staff take care of the children closely. They create a warm and comforting atmosphere, and provide opportunities for children to express their different thoughts.

They encourage trial and error, believing that children will grow with confidence in themselves and have a positive mindset.

— Khun Hobs, happy parent

At Prep, we believe that children should love coming to school and flourish in a carefully prepared and supportive learning environment. Our aim is to develop each child into an "Independent Learner with a Love of Learning". We achieve this using a learning process grounded in the Montessori approach along with play-based and child-centred teaching strategies. Prep has a home-like and intimate atmosphere with a spacious garden and well-equipped playground. We welcome prospective families to come and see our early years learning magic in action.

Regent's International School, Bangkok

Scan here to view a video presentation from the BKK Kids Virtual School Summit

Celebrating 28 years of success, Regent's International School, Bangkok and Langsuan campus aim to bring out the best in everyone. Our graduates are well-rounded, informed, principled and confident global citizens. We provide a secure and caring co-educational day and boarding environment in which students develop the self-discipline, skills and values necessary to realise their full potential. Students follow an enhanced English National curriculum from ages 2 – 18 years. We are passionate about developing the whole person through academic, physical, cultural and social experiences. We are guided by the British curriculum from the Early Years Foundation Stage (EYFS) learning to IGCSEs. Post 16 we adopt the IB (International Baccalaureate) Diploma Programme.

We follow the German Kindergarten model, which means we work child-centric and regard free play as a core pillar of development. We believe that allowing children to develop at their own pace leads to greater independence, an intrinsic interest to learn and a positive self-image. Children participate in many aspects of our school, such as decision making, cooking, and gardening. Our goal is to create experiences that shape your child's behaviour, thinking, language and character to become an optimistic, friendly and intelligent human being.

Founded in 1957, RIS is one of Thailand's longest-running international schools. "Ruamrudee," Thai for "union of hearts," perfectly captures this Catholic school's philosophy of welcoming all children, emphasizing social responsibility, and ensuring a warm, inclusive environment. 21st-century learning at RIS focuses on the three elements of *Head* (knowledge), *Hands* (skills) and *Heart* (values). RIS teachers are committed to developing their instructional craft through innovative strategies and modern technology solutions. Students are nurtured to develop necessary critical-thinking skills for success in the IB and AP programs of high school. English Language Development and Learning Support departments also ensure students receive an appropriate balance of challenge and support. For over six decades, the RIS community has been a connected global network where teachers often state their admiration for their students and alumni look back with fond memories and nostalgia.

Shrewsbury International School Bangkok, City Campus

Shrewsbury City Campus (opened in 2018) offers primary education for children aged 2-11 years (Nursery to Year 6). Our learning environment is enriched by highly qualified teachers committed to fostering intellectual curiosity, academic excellence, and well-being of children. Year 6 graduates from Shrewsbury City Campus have a guaranteed place to Year 7 Senior School at Shrewsbury Riverside.

Situated in Sukhumvit-Rama 9 areas, students enjoy access to collaborative learning spaces, greenery outdoors, and a fully equipped Sports Centre complete with a natural grass football field, indoor Sports Hall, Gymnastics Centre, and two covered swimming pools. The campus also boasts Music and Performing Arts spaces, Design & Technology and Digital Media Studio - all tailored to young children.

Following the successful launch of Nursery classes in 2021, expansion plans are underway to enhance the Early Years Hub by 2024, accommodating a growing student body and reaching a full capacity of 720 children across the campus.

Shrewsbury International School Bangkok, Riverside

Riverside (opened 2003) offers a through education for 2000+ boys and girls from 3-18 years and is regarded as one of the leading international schools in Thailand. With the recent addition of a brand new Senior School with university-level Robotics, Innovation, Science, Maths and Sporting spaces, Shrewsbury has set the bar very high in terms of teaching and learning facilities. Nestled on the banks of the Chao Phraya River in the heart of Bangkok, Riverside is an awe-inspiring place that enjoys an unparalleled reputation for music, the arts, sport, and academic excellence.

With an expert Higher Education team and a purpose-built Sixth Form Centre, Shrewsbury regularly places graduates in the world's elite universities such as Oxford, Cambridge and many other US Ivy League colleges. Couple this with the region's best exam results, and you will see why the School continues to exemplify itself as the premier 3 to 18 education institution in Thailand.

TCBS is a bilingual co-ed school using international materials to enhance student learning. From G1-G12, our bilingual program fosters cultural pride while expanding language skills. Students access three core offerings: the English Program with Mandarin, the Mini English Program (G7-12), and the Canadian High School Diploma Program (G10-11) for dual certification from the Ministry of Education in the Quebec Province and the Ministry of Education in Thailand. Graduates leave TCBS with diverse qualifications and practical experience.

Additionally, we offer separate boarding facilities for male and female students, aiming to create a comforting 'home away from home' experience. Our dedicated staff provide genuine care, offering support and mentorship for all aspects of student life.

St. Stephen's International School

Scan here to view a video presentation from the BKK Kids Virtual School Summit

St. Stephen's International School aims to provide a truly international education whilst maintaining the values and customs that are so important to our Thai community; East certainly does meet West at St. Stephen's in the best possible way. Our campus communities are happy and caring. Whether in urban Bangkok or in the beautiful environment of Khao Yai, staff, students and parents all contribute to the special family atmosphere, which is apparent to even the casual visitor.

The Tiny Seeds boasts itself as one of the first schools to introduce Life Lessons into our curriculum. We are dedicated to developing the Whole Child to become a citizen of their world. Children are encouraged to develop their own personality and to be the best version of themselves.

Our most important lessons are to equip our children with happiness, compassion, acceptance of others, self-sufficiency skills, strong learning ethics and good habits that will serve them well for the rest of their lives.

Wellington College Bangkok follows the British curriculum to provide an exceptional pioneering education empowering and preparing each child to navigate an unpredictable and ever-evolving world with confidence, passion, intellectual rigour, and emotional intelligence. As part of the prestigious Wellington family, founded in 1859, students are inspired to explore their interests both inside and outside the classroom. Students are encouraged to be intellectual, independent, inclusive, inspired and individual. Every child is different and every child will realise their potential. They will follow their own pathway throughout their school life, a pathway to leading universities across the world and to becoming a responsible global citizen who will help shape a better world.

BEYOND BANGKOK INTERNATIONAL SCHOOLS

When searching for an excellent international school in Thailand, many families often opt for the bustling capital city, which in Thailand is Bangkok.

While Bangkok is undeniably a fantastic location for international schools, there's a misconception that major cities offer superior opportunities compared to smaller ones. Living in one of Bangkok's neighboring provinces can provide unique advantages, as it allows families to escape the daily hassles of traffic jams and the throngs of people moving in the same direction.

In the heart of Bangkok, finding spacious houses may be a luxury, unless you have a substantial corporate budget, and condos can be small and cramped, especially with energetic toddlers. Opting to reside in a neighboring city like Pattaya or Hua Hin still offers access to top-notch international schools while providing the added benefit of having a pool in your own backyard.

Moreover, living outside the bustling metropolis and becoming part of a smaller school community

can open the door to meaningful connections with fellow parents, avoiding the rushed "hi & bye" scenarios during hectic school drop-offs. Considerations such as traffic and location become more manageable outside the big city, where children won't have to endure long hours stuck in traffic on their way home from school.

Schools in the provinces still participate in Bangkok sporting and art events so don't feel your children will miss these opportunities. They also organise trips into the city to participate in debate events, as well as using the city facilities in terms of art galleries & museums and science & discovery.

You will find many of the beyond Bangkok schools will also offer boarding opportunities which can be another option to consider. In Thailand whatever International school option you choose for your child, rest assured you can find something tailored to your family's needs and our team will help you every step of the way.

The American School of Bangkok Green Valley

The American School of Bangkok Green Valley (ASBGV) is a WASC accredited Pre-K to grade 12 American Curriculum school. We offer AP Capstone, AP classes as well as IB Diploma. Situated in a gated community, ASBGV provides a safe and nurturing environment with boarding facilities and an International Preparatory Golf Academy (IPGA). We specialize in mindfulness education, which we value as an essential part in the holistic growth of students. ASBGV proudly maintains acceptances to the "Top 100 Universities of the World".

ISC began with a vision to create an early years school, inspired by the philosophy of Reggio Emilia. Another aspect of that vision was to establish it in as natural a setting as possible so that the transition from home to school would make children feel secure. Each year, we have proudly opened one more year level and now we have completed our Primary Years. Our mission is to foster a community of active and reflective learners who are informed and confident. They will embrace sustainability and cultural diversity, in order to be successful as they grow in a changing world.

Rugby School Thailand

Rugby School Thailand is a leading co-educational, international school catering to day students aged 2 to 18 and boarding students aged 10 to 18. The focus on the British curriculum provides students with opportunities to excel through IGCSE and A Level examinations, recognised worldwide as a gold standard for university entrance.

The school's state-of-the-art 80-acre campus fosters an active and vibrant student lifestyle. Academic excellence is a top priority, but the ethos of "The Whole Person, The Whole Point" is evident in everything they do. Smaller class sizes and extended school days enable students to seamlessly integrate sports and an award-winning enrichment program, fostering resilience, reflection, versatility, global-mindedness, critical thinking, and collaboration skills. This holistic approach nurtures well-rounded students who are prepared for success in the global community.

CHIANGMAI INTERNATIONAL SCHOOLS - BEYOND BANGKOK

Location is one of the many important factors prospective parents have to weigh when choosing where to go to school – it's also about the educational setting. Many families moving to Thailand don't always find themselves living in the capital city of Bangkok. Corporate companies now have both offices and based outside of Bangkok creating the need for international schools to be located in the surrounding provinces. Families living outside of the city find the commute into the international schools in Bangkok just not feasible.

There are many benefits to attending a school outside of a big city, generally they have less pollution issues, far less traffic which results in less stress getting to and from school. Many of the schools in the provinces outside of Bangkok gave large sprawling campuses which means for students it's easier to "get away from it all" even if that means just taking a leisurely walk around campus, or finding a green space on campus to sit and do homework. Rural schools offer students the opportunity to enjoy the natural surroundings and greenery, being surrounded by nature is particularly beneficial for students mental and emotional welfare.

Attending a school outside of a big city you will often find both students and parents have a strong campus community which means you're likely to run into people more frequently, which makes it easier to build long-lasting friendships and connections. You will also find due to the size of the campuses many on-site after school activities are available without having to rush around the city from one activity to the next. One of our Beyond Bangkok schools boasts its own lake, while another has an on-site golf course.

With this in mind, over the last few years we have seen the emergence of many new International schools opening in provinces outside of Bangkok and in the other major cities across Thailand. Let's face it what's not to love about after school activities either on your schools private lake or beach.

Due to the demand for good international education outside of Bangkok, we now have a dedicated category on our website created specifically for these excellent alternatives to big city education.

Bright Seeds International Kindergarten opened its doors to children aged 18 months to 6 years old in Nimmanhaemin in August 2019. Conveniently located, our school focuses on providing a safe and happy learning environment for your child to grow and develop with the guidance of fully qualified teachers.

OUR VISION

"Nurturing Young Minds to Become Kind & Happy Lifelong Learners"

We aim to do this by implementing the inspiring child-led Reggio Emilia approach as a platform for delivering the International Preschool Curriculum (IPC), the most internationally accepted early childhood education (ECE) curriculum in the world. Our Goal is for each child to develop a love for learning, to be well-rounded and equipped with the skills needed to be a responsible Global citizen.

Christian German School Chiang Mai (CDSC)

CDSC was founded in 1994 by the Marburger Mission Foundation, together with the Church of Christ in Thailand (CCT) and in cooperation with the German embassy in Bangkok. In 2022, CDSC received the seal of "Excellent German School Abroad" again after having successfully passed the Bund-Länder-Inspektion (BLI) - an inspection by German educational authorities.

CDSC also offers the German Preparation Course for non-German speaking students. Those who successfully complete the 20-week course will be given the opportunity to join the 5th grade at CDSC.

German Preparation Course
Christliche Deutsche Schule Chiang Mai

The German Preparation Course is to provide basic German lessons to non-German speaking students who want to join CDSC. Applying students must be fluent in English (B1 level) and have excellent grades in mathematics. Admission after the course is only possible in the 5th grade. Please visit our website for more information.

CMIS is a dynamic international school with over 500 students, but it is still small enough to retain a friendly and relaxed campus environment. It also remains true to the traditions of its founders, serving missionary families and maintaining the heritage and values of the Christian faith at the heart of the school, while welcoming children of all faiths, cultures, and ethnic backgrounds from the growing international community in Chiang Mai.

Their vision is to provide educational excellence in a caring Christian community that respects and celebrates diversity. Their mission is to develop learners who can pursue personal and academic goals, based on educational excellence and strong moral foundations. To equip international students for lives of learning and positive contributions locally and globally.

Grace International School is a quality, affordable Christian school in Chiang Mai, Thailand. GIS exists so that international Christian workers are enabled to remain abroad due to the educational and spiritual needs of their children being met. These needs include access to distance education support, adaptive instruction, and tools that enable students to grow in their personal faith journey with the Lord.

The Vision of Grace International School is that every student will know who they are in Christ, that they will experience a quality education in an inspiring learning environment, and that they will be equipped with a Biblical worldview to impact the world for Christ.

Meritton British International School

We are the first school in Thailand to be awarded the prestigious Values-based Education Quality Mark accreditation. Our Values-based Education program promotes values in everything we do as a school community. We accomplish this through awareness, regular values activities, values celebrations, daily mindfulness and community workshops.

Together with this, the rigorous English National and Cambridge International programmes are our core curriculums. Our holistic approach gives our students a complete learning experience that fully meets their social, emotional, physical and intellectual needs.

International School

Chiang Mai, Thailand

Welcome to Prem!

-  A day and boarding school
-  A WWF Green Flag Eco School
-  A leader in the development of the arts and creativity in international education
-  Over 100 school sports and activities
-  All 4 International Baccalaureate Programmes
-  A Forest School
-  An Intensive English Programme
-  All on one of the most beautiful natural campuses in the world

Where you belong

Find yourself at Prem.

Prem International School

Scan here to view a video presentation from the BKK Kids Virtual School Summit

Prem, a prominent international boarding and day school situated on a lush 100-acre campus, champions a progressive academic approach. Offering all four International Baccalaureate Programmes and facilitating students' entry into prestigious global universities, Prem emphasizes the fusion of academics with creative exploration and exposure to the arts. Recognized internationally as a leader in fostering creativity, Prem's award-winning Artist Residency Thailand programme brings in world-class artists to work with students and faculty. Additionally, Prem's Exploria features over 100 sports and activities most of which take place on its beautiful campus complete with its own farm, Forest School, Cooking Academy, Golf Centre, Music and Tennis Academies, Olympic-sized swimming pool, and International Cricket Council-approved cricket pitch.

All aspirations are welcomed to discover what they can achieve with the right programmes, teachers and support.

ARTIST RESIDENCY THAILAND

CREATIVITY AT PREM

Courtesy of Prem Tinsulanonda International School Chiang Mai

About The Artist Residency Thailand

Our award-winning Artist Residency Thailand program is a powerful initiative that fosters creativity, transforms teaching and learning, and enriches our entire community. Welcoming collaborations with world-class artists, creative practitioners, activists, and creative thinkers, our students, teachers, and community are regularly exposed to a diverse range of creative perspectives that help foster a deeper and more personal understanding of the world.

Participating in the Artist Residency Thailand programme equips our students with invaluable skills that extend beyond the realm of the arts. They learn to think critically, express themselves confidently, and collaborate effectively. The program nurtures their creativity and empowers them to approach challenges with an open mind and innovative solutions. By engaging with renowned artists and experts, our students develop the vital skills necessary to engage with and succeed in an ever changing world.

For more than ten years the program has created an inspiring cultural hub where screenings, seminars, and concerts bring our community together, fostering a sense of unity and creativity. The work developed through the program has even reached international stages, celebrating the creative achievements of our students and practitioners alike.

Prem educators and leadership teams work with a Creative Director to integrate creative inquiry and the arts to enhance and enrich learning in all areas. We firmly believe that a progressive academic curriculum is key for a successful future. However, we recognize that true excellence and fulfilment in life stem from creative exploration and exposure to the arts. We are proud that our students develop the tools necessary for a truly successful life through our commitment to artistic education and creative inquiry.

Prem educators commit to the following guiding principles for nurturing creativity:

- ENGAGE**
Our students are excited about their learning.
- ENHANCE**
Teachers and students believe in growth and going beyond expectations.
- ENLIVEN**
We make our learning visible.
- EMPOWER**
We develop resilient and confident children and young people.

Prem students receive unique learning experiences through collaboration with world-class creative practitioners and creative thinkers. Our award winning ARThailand programme partners with leading experts, creates powerful learning opportunities and benefits students, staff, and our broader community.

“Prem understands that an excellent academic offer ensures students have all the necessary skills to build a successful life, but it is through creative engagement and exposure to the arts that we help our students develop the necessary skills to live a successful life”

Alex Soulsby
Creative Director

Unity Concord International School (UCIS)

Nong Phueng, Amphur Sarapee, Chiang Mai
Phone (052) 135 061 Email info@ucis.ac.th
Website https://www.ucis.ac.th

Unity Concord International School Chiang Mai (UCIS) was opened in 2017 by Amporn and Chugait Garmolgomut. The Garmolgomuts are award-winning teachers and school administrators with more than 30 years' experience as educators. The other schools operated by Amporn and Chugait Garmol Gomut are Americana Chinese International School (ACIS - August 2019), British Concordance International School (BCIS - August 2022), Little Stars Bilingual School, Ambassador Bilingual Academy (July 2020), Ambassador Bilingual School (ABS), CEC Language School.

Unity was founded (2016) and opened its doors to students on August 28th, 2017, at the time offering Pre-Kindergarten to grade 5 with an enrollment of approximately 150 students. This number climbed throughout the year to approximately 220 students by the end of the second semester. Unity now accepts students from Pre-School 1.6 years old - Grade 12 and has approximately 760 students currently enrolled.

Varee Chiangmai International School

Varee Chiangmai International School

Varee Chiangmai International School (VCIS) provides "An Education Beyond Tomorrow", an education for the 21st century, which means that the education our students receive will continue to be of benefit for the rest of their lives. The Cambridge curriculum is modern and forward thinking and the tools they learn to use during their time here will help them develop into confident and independently minded international citizens.

VCIS offers a unique opportunity for students to gain an international education, while learning to be members of a multi-cultural community and developing their own personal strengths, from Early Years to graduates.

PANYADEN FRESH AIR CLASSROOMS BOOST LEARNING, HEALTH AND WELL BEING

Courtesy of Panyaden International School

We all know exactly what air pollution is and the damaging effects this has on our bodies, but are we aware on the impact it has on little lungs? Annually the conditions in Chiang Mai with increasing traffic and seasonal burning across Thailand this results in awful air pollution.

At Panyaden, we are acutely aware that education is not simply about delivering a curriculum for students to absorb. It is about creating the best possible environment for their health, growth as well as learning. It is about the school as an institution setting an example for our students to learn from and use as the inspiration for future innovation.

Given the seasonal conditions of air pollution that Chiang Mai is faced with, which can be very risky for young people and be detrimental to their health in the long-term, Panyaden was keenly interested in finding long-term, sustainable and environmentally friendly solutions that met with the ethos of the school. The Panyaden Fresh Air System, specially designed for the needs of the school and in consideration of the local environment, uses less energy than air conditioners and air purifiers, ensures a consistent supply of fresh, oxygenated air, reduce CO2 levels in the classrooms and relies on underground pipes and air flow for lowering the temperature naturally.

The Panyaden Fresh Air System is a pre-cool and purified air system using sustainable environmental engineering, the first of its kind in this region, initiated by Prof. Erich Erber in 2019, with the

ambition to create a haze-free classroom condition for the well-being of all Panyaden students and staff members.

The Panyaden Fresh Air System was successfully installed and has been operating in the school's secondary campus buildings since August 2020 to pre-cool and purify the indoor air, bringing the Air Quality Index (AQI) value down to green level (AQI 0-50 = Green), even when outside AQI is above 200. The Fresh Air System effectively provides a constant supply of fresh air, as the CO2 index inside the rooms remained much lower compared to standard air-conditioned rooms. The benefits of this system makes classrooms at Panyaden a safe environment for our students.

The innovative Panyaden Fresh Air System was initiated to improve quality of life at school for our community members, especially during the few months of smoke season in Northern Thailand. The system provides a zero haze and PM2.5 free (polluting particles in the atmosphere) classroom environment to our students. While normal air purifiers help to reduce PM 2.5, the level of carbon dioxide in a sealed room can rise rapidly, leading to headaches, drowsiness, and reduced learning capacities. This innovative air system supplies cool, fresh and clean air inside the rooms while minimising our carbon footprint. The system

also creates positive pressure inside the room. This means that outside air does not enter the room and air inside the room (carrying CO2 or sometimes with contaminants or viruses) can flow out when the door is open. Thus, we can ensure that our classroom is safe for our students' health. It is a true life improvement, using a sustainable and environmentally friendly energy alternative to standard air conditioners and air purifiers. Panyaden is proud to be the first school in this region to use this innovative Fresh Air System in all classrooms on the campus.

The Benefits of the Panyaden Fresh Air System

There are several benefits to using the Panyaden Fresh Air System instead of the standard air conditioners and air purifiers:

- Cooler air inside the classroom during the hot season. The indoor temperature remains at a comfortable level of 27-28 degree Celsius.
- Cleaner air inside the classroom, with a much lower rate in CO2 and PM2.5. This means there is more oxygen supply and less polluting particles in the atmosphere, which can boost the performance of the students.
- 30% less energy consumption compared to standard air conditioners, thus providing a more environmentally friendly solution.
- The air pressure inside classrooms equipped with the Fresh Air System remains higher than the outside air (making it a positive pressure room). This means when a door or window is opened, the inside air would be pushed out of the classroom, and unfiltered air would not be able to enter the room.
- The Panyaden Fresh Air System will be a Learning Center, the first of its kind in Asia, for Panyaden students and the public to learn how to use environmental science to innovate sustainable engineering systems.

How the Panyaden Fresh Air System Works

The Panyaden Fresh Air System saves energy by using a thermal exchange process, using cooler temperatures underground. The steps this system follows are:

1. Outside air with ambient temperature is pumped into an underground pipe system using a powerful fan.
2. The air then is cleaned using an active charcoal hepa filter which removes germs, smell and PM2.5 from the air.
3. The air is pre-cooled using an earth cooling system consisting of 10 fifteen meter long pipes underground, then filtered again before supplying to the classroom. The volume of the air required to provide enough cool, fresh and clean air inside the classroom is calculated based on the thermal difference between the classroom and the earth cooling system, and the total number of people in the building.
4. The fresh-air-supply creates positive pressure (5 pascal) in the rooms, reducing CO2 and PM2.5 levels, and increasing oxygen supply.
5. The classroom buildings use a VRF (Variable Refrigerant Flow) to maintain a good cold air distribution in the rooms, which is the best air conditioning system available in the current market.

PHUKET INTERNATIONAL SCHOOLS

An international school on a tropical island, sounds like a child's paradise!

Many families moving to Thailand don't always find themselves living in the capital city of Bangkok. Corporate companies now have both offices and based outside of Bangkok creating the need for international schools to be located in the surrounding provinces and islands. With the opening of an international airport in Phuket making connecting to this beautiful island easier, many families are choosing this as an option for education.

There are many benefits to attending a school outside of a big city, generally they have less pollution issues, far less traffic which results in less stress getting to and from school. Many of the schools on Phuket have large sprawling campuses which means for students it's easier to "get away from it all" even if that means just taking a leisurely walk around campus, or finding a green space on campus to sit and do homework, and don't forget you have pristine beaches close by to!

Attending a school outside of a big city you will often find both students and parents have a strong campus community which means you're likely to run into people more frequently, which makes it easier to build long-lasting friendships and connections. You will also find due to the size of the campuses many on-site after school activities are available without having to rush around the city from one activity to the next.

With this in mind, over the last few years we have seen the emergence of many new International schools opening in Phuket and let's face it what's not to love about after school activities on the beach.

Due to the demand for good international education outside of Bangkok, we now have a dedicated category on our website created specifically for Phuket schools and early next year will see us launch our southern sister site phuketkids.com so watch this space!

British International School, Phuket

British International School, Phuket (BISP) is a co-educational day and boarding school, established in 1996. The school is set in extensive landscaped grounds and benefits from a healthy tropical island environment. The school delivers the highest standards of teaching to an international community, emphasising a balance of learning, wellbeing and passion. BISP offers a British-international curriculum, opening with the play-based English Early Years curriculum and progressing into an internationalised British Primary programme. In Secondary, BISP students follow the British Secondary curriculum and undertake IGCSEs in Years 10 and 11. In Years 12 and 13, students study for the IB Diploma or BTEC Level 3 in Sport and receive a BISP High School Diploma. BISP's mission is to inspire learning, nurture wellbeing and ignite passion.

It is our mission to provide a creative, unique, and progressive educational program and to develop a community of students that value being respectful and that are motivated to become independent thinkers and problem solvers.

We offer personalized learning-instruction that is paced to students learning needs and tailored to students learning preferences/interests. Our objectives, content, pace, and method of instruction may vary from student to student. We give focus to our student's strengths and allow them the opportunity to excel in academic subjects that are beyond the standard in which has been set for their age. We do value structure and consistency within our daily schedules, but students are also encouraged to explore, be curious and to make their own decisions about what they want to do. Our students love coming to school and we love having them there!

At Indigo Kids our curriculum follows the English statutory Early Years Foundation Stage (EYFS) and our approach is very much aligned with the Finnish system. Until 1970 Finland had an underperforming education system which, as a result of major reforms, is now first in the world. This was achieved partly by reducing teaching hours and increasing play hours; removing homework and encouraging family time and hobbies; studying 'topics' as opposed to just 'subjects'; removing exams; encouraging creativity; and empowering pupils.

Phone (064) 468 9957 **Email** info@phuketmontessori.school

Website www.phuketmontessori.school

Rainbow Montessori House Phuket is an international early learning Preschool and Nursery from ages 1 to 6. This is a great opportunity to immerse your children into the English language at an early age, giving them the greatest opportunity for later in life. Montessori is a method of education that is based on self-directed activity, hands-on learning and collaborative play. In Montessori classrooms children make creative choices in their learning, while the classroom and the trained teachers offer age-appropriate activities to guide the process. The education in our kindergarten is primarily in English however there is Thai lessons within the curriculum.

The Australian Montessori National Curriculum is available online for everybody and Rainbow Montessori House Phuket is following the Early Years Learning Program: Three to Six Years prepares all students for the future.

Rainbow Montessori House Phuket Educators create a prepared environment that nourishes the love of learning and that encourages children to discover the new world.

The Waldorf Phuket

235 Srisoonthorn Cherngtalay, Thalang, Phuket 83110

Phone (098) 912 4218 **Email** info@waldorfpuket.com

Website www.waldorfpuket.com

The holistic education offered at The Waldorf Phuket School nourishes the whole child: head, heart, and hands and thus a balanced relation between thinking, feeling and doing. We believe in an unhurried childhood, where the children are immersed in free play, surrounded by nature and natural materials.

Our developmentally based curriculum, whether in mathematics, language, philosophy or art, promotes inquiry and deep thinking in a holistic manner. The inter-disciplinary nature of subjects is also brought about through a holistic approach to learning. Permaculture, gardening and cultivating a sense of where our food comes from is also an essential part of our educational journey. The small class sizes allow for a great deal of individual attention.

The Waldorf Phuket location offers a unique experience for the students. Natural open classrooms in a rural setting makes for constant and direct interaction with animals and nature. Our ongoing school expansion project gives the children the unique experience of building and expanding their own school while dwelling in nature.

UWC Thailand is a non-profit international school located in Phuket, dedicated to its motto of 'Good Heart, Balanced Mind, Healthy Body'. The school provides a comprehensive and rigorous International Baccalaureate (IB) continuum education from Pre-Kindergarten to grade 12, catering to both day and boarding students.

The programming at UWC Thailand is grounded in mindfulness, outdoor experiential education, sports, and community engagement. These opportunities for continuous growth in a safe and nurturing environment allow students to develop the skills and dispositions that will transcend time and prepare them for the resilience needed in an ever-changing world.

Being a part of the UWC movement, UWC Thailand students are connected to an unparalleled global network of more than 60,000 alumni. They enjoy impactful learning experiences, enriched by the deliberate cultural diversity of our community, and driven by the common goal of our students to 'be a force' for 'a more peaceful and sustainable future' now and for generations to come.

ACADEMICS OUTDOOR SPORT MINDFULNESS COMMUNITY ENGAGEMENT

PUTTING WELLBEING FIRST AT THE BRITISH INTERNATIONAL SCHOOL, PHUKET

Courtesy of British International School, Phuket

At BISP we are committed to institutional wellbeing. A strong wellbeing foundation leads to a purposeful, balanced and productive learning community, where we can all thrive and flourish.

Our understanding of wellbeing is evident in the way we talk to students and each other, the behaviours we model, and the core values we uphold – respect, compassion and integrity. It is implicit in our interaction with others, and the professional and moral code that we follow in our school. We unlock potential in each other and encourage periods of reflection to support personal growth.

THE BISP WELLBEING MODEL

Wellbeing is multi-dimensional, and our programme includes elements of positive psychology allowing us to develop aspects of character growth and personal development as follows:

Cognitive Wellbeing: A belief in the limitless opportunity and endeavour that learning presents.

Spiritual Wellbeing: Being mindful of the present and finding meaning and purpose in life.

Social Wellbeing: Interacting with people in our community and beyond, in a way that enables us to 'connect, act and reflect'.

Emotional Wellbeing: Using positive emotion to reflect with gratitude, enabling us (and others) to flourish in our community.

Physical and mental wellbeing: Being active and engaged in both mind and body with experiences that support healthy and optimal living.

OUR COUNSELLING TEAM

Our school counselling team provides support to students across the school and contribute proactively to our emotional wellbeing sessions. Specifically, our counsellors provide a high-quality counselling service to students who experience a wide range of emotional problems as well as providing support, guidance and advice to parents, carers and the school.

The counselling service contributes to our wider safeguarding measure to promote the safety, wellbeing and personal care of children and young people.

PARENT WELLBEING

The school also contributes to the wellbeing of the wider school community – both staff and parents. We recognise that the role of the parent is essential in a child's wellbeing, therefore the school has run a number of wellbeing sessions for parents on topics such as, "Understanding the teenage mind", "Mindfulness" and "Supporting your child through COVID".

STAFF WELLBEING

Staff wellbeing is also essential to creating a happy and productive working environment. We have an exceptionally low staff turnover at the school which is a testament to how staff wellbeing is looked after. This then allows students to have a strong sense of belonging – and also allows them to develop long-lasting positive relationships with staff over a number of years.

The school operates an open-door policy where all the senior leadership team are available to discuss any issues and tackle them before they become problems. The school looks to provide activities for staff to promote a sense of family – from sporting

activities to social events. The school counsellor is also available for all staff to speak to if required. Ultimately the school looks to employ staff who will be teachers of the child first – regardless of their subject area of expertise. This then provides our students with positive role models in their lives which allows them to develop into resilient adults.

HOUSE AND BELONGING

Each student and member of staff is a member of a House which is organised according to vertical age groups (a mix of students of all ages). Our system intentionally aims to :

- Emphasise student agency and leadership.
- Develop a sense of identity, camaraderie and belonging.
- Provide a sense of inclusion and engagement
- Facilitate a framework for healthy competition.
- Facilitate purposeful service to our local community.

Alongside fun competitions organised by the House Captains, students participate in a variety of sporting, academic, service and musical activities as members of their House at regular intervals throughout the year. Participation in these events is part of the year-long House Competition.

At the end of each term, points earned through these activities are tallied up, and the winning House is presented with an award, culminating in the presentation of the House trophy at the end of the year.

THE BENEFITS OF ATTENDING A BOARDING SCHOOL

Launching our kids into the world of adulthood is not always about making sure they benefit from the best possible education we can offer them; though that is important too. It is also vital as parents that we provide a healthy and nurturing environment for them with all the necessary support systems in place. Educating kids is more than just academics, it's about giving them the right tools to build their life skills, promoting good emotional intelligence and mental health as well as encouraging them to build resilience, resourcefulness, and social confidence.

All of that is a full time job particularly when you add distractions from technology into the mix, so what happens when both parents are working or due to unforeseen circumstances or you need to suddenly move to another country? Yet the answer could be relatively simple, sometimes boarding schools can be a good option.

Boarding schools provide environments in which children and adolescents are engaged, active and interested, it's not a model that suits all families or children but it is definitely an option worth considering to afford kids' stability and continuity throughout their academic life.

A number of international schools in Thailand offer students the option for boarding, which affords more flexibility for families, including those who

reside in the city and abroad. Living on campus, students enjoy plenty of comforts, like they do at home, and the experience fosters greater confidence and independence. Boarders also form close relationships with their peers and enjoy a range of enriching after-school, evening and weekend activities.

Depending on the school, boarding is available to students in Years 5 to Year 13 and provide ample opportunities for children to advance both academically and socially. Students are immersed in a well-structured study routine that allows them to complete homework, as well as participating in extracurricular activities. They benefit from having full use of campus facilities such as, tennis courts, swimming pools, football pitches, gyms, a sports hall and library. The Boarding Houses are also a blend of diverse nationalities and this international environment adds to the warmth within each House; everyone is supported in their beliefs and encouraged to be sensitive to those around them. Having your child attend a boarding school is a very personal decision and like any other style of education, not one size fits all. Every parent's goal is to have a happy, full filled and well stimulated child who is equipped to reach their full potential in adulthood. Boarding schools can offer a springboard into those next important steps towards independence.

Here is our list of recommended boarding schools in Bangkok and a little bit beyond.

KIS REIGNWOOD PARK OPENS IN AUGUST 2024 WITH A NEW WORLD-CLASS 60-ACRE CAMPUS!

Courtesy of KIS International School Reignwood Park

KIS International School has been delivering an outstanding IB education for the past 25 years in Bangkok. Opening in August 2024, their second campus, KIS International School Reignwood Park, will be Bangkok's only Full IB Day & Boarding School. Offering an exceptional world-class 60-acre (150-rai) campus within the exclusive Reignwood Park community located in Lam Luk Ka, Pathum Thani, less than an hour's drive from downtown Bangkok and both airports.

KIS Reignwood Park will open for students aged 3 to 14 (Early Years to Grade 9) and then an additional grade level will be added each year, providing a comprehensive IB education from Early Years 1 to Grade 12. Boarding is also offered for students in Grade 4 (aged 9) and above offering a dedicated boarding village attached to our world-class campus, offering a wealth of activities and study support with highly experienced boarding staff and teachers.

An Outstanding IB Education

KIS International School's reputation for academic excellence is supported by their consistently high IBDP scores, which have seen them average 34.5 points over the last five years, well above the world average of 30 points. Success continues with students graduating KIS with a wide choice of offers stretching across over 10 countries and more than 120 different universities and colleges each year.

Weekly And Full Boarding Options

KIS Reignwood Park offers weekly and full boarding options for children in Grade 4 and above in a safe and secure dedicated boarding village attached to the main campus. Stylish, comfortable bedrooms offer private bathrooms and ample storage to ensure a home away from home feel, with four or two beds per room and single bedrooms for seniors. All accommodation is located within the boarding village, which offers a dedicated multi-purpose dining hall, study areas, and leisure and relaxation areas.

"Boarding at KIS Reignwood Park is a warm and welcoming home away from home where staff care deeply about their students and help them succeed. We work together with parents and families to ensure that our boarders receive the best possible care, nurturing their confidence, academics, passions and independence. I have over 20 years of experience in boarding schools and would love to speak with you to discuss your child's needs and the wonderful boarding experience we offer in our unique KIS Boarding Village." **Elizabeth Hammond, Director of Boarding**

Exceptional Facilities

KIS Reignwood Park's exceptional new campus has dedicated buildings for Early Years, Primary, and Secondary students. Supporting these academic buildings are an array of facilities including a 1,000-seat auditorium and an expansive indoor Sports Complex housing an Aquatic Center, 1000-seat Sports Arena, Golf Development Academy, Fitness Suite with indoor running track and fully-equipped Gymnastics Hall.

Learn more about KIS Reignwood Park at www.kisrp.com or call their admissions team on +66 (0) 94 235 3000

Ready for School?

Many preschools in Bangkok accept children as young as 18 months old, but that doesn't necessarily mean your child is ready to go, or you're ready to send them, by that age. We provide some information to consider when deciding the best age to start your child, plus some first-hand experiences from other Bangkok parents.

A Is your child independent?

Though most preschools in Bangkok have nannies and other helpers, children will often be required to do basic tasks on their own, such as washing their hands and eating lunch or snacks.

B Can your child communicate?

For some parents, whether their child can speak enough to talk about their day, communicate their basic needs or tell them if something is wrong is essential before sending them to preschool.

C Is your child toilet trained?

Most preschools in Bangkok will take children who are still in diapers, but a handful do not. If your child is not potty trained your choices will be more limited, but many schools will offer help on that front (or end).

D Is your child still napping in the morning?

Though some preschools offer structured nap time for smaller children, many do not and will expect your child to be able to make it through the morning without sleeping.

E Is your child ready to be separated from you, or their primary caregiver?

Some children won't shed a tear on their first day of preschool. Others, regardless of their age, will have a hard time making the transition. There are some techniques that can help ease their distress but there are no guarantees the process will be tearless.

Though many parents point to plenty of benefits in sending their children to preschool, the jury is out on whether it benefits young children in an objective, measurable way.

F Are you ready to be separated from your child?

There really is no "right" time to send your child to preschool. Regardless of what others are doing, all parents agreed that this was a personal decision.

"I sent my girl when she was 18 months but my boy is now two years and ten months and has yet to start. He's very clingy because I've been his sole caretaker since we moved here (he was eight months then) and he's been with me day and night since then. He also can't really speak properly yet, which is why I'm not confident to start him. But I'm planning to start him... when he turns three. Hopefully he learns to be more sociable and learns to pick up more words. I am prepared for a whole month of tears and screams when I start him at school. So dreading it."
Kristy Geraldine Ho

The evidence

There is very little data available to evaluate whether it is beneficial or not to send children to preschool before the age of three. Some studies do show that disadvantaged children who receive high-quality preschool programming before three will fare better than similar peers who do not. Evidence about benefits for children who are not disadvantaged is not as clear, though.

For older children, the data seems to be more compelling. Children across socioeconomic groups appear to benefit from high quality preschool programs in terms of cognitive ability, behaviour and other factors. Some studies show that children who attend preschool are ahead in early reading and math, though whether that benefit continues for more than a few years is not clear.

Full-day care

Daycare centers are a necessity for working mothers in most countries but here in Thailand it's not as common. Instead, in-home nanny care is the norm. Most preschools only offer half-day programs for children under 4, so you'll still need to find other care for them to cover the rest of the work day. Many families opt for a nanny in the afternoon, either having their nanny do other tasks during the school day, or finding a nanny who is willing to work parttime afternoon hours.

Immeasurable benefits

Many parents say they see benefits in their children's demeanor, "socialisation" skills and ability to listen, to share and to interact with other adults and children. Whether these are developmental changes that would have happened whether or not the child went to school is unknown. But whether there are measurable benefits or not is beside the point for many families. For them, it's about what works for the family and whether their child is enjoying themselves.

PLAY MONDO CUBS BY PLAY MONDO

Discover the awesome world of Playmondo across 4 fantastic locations: Central World, Central Eastville, Central Ladprao, and Central Rama2! We've designed 4 cool play zones, inspired by nature, for kids age 0-13. Dive into adventures in our desert, ocean, volcano, and forest zones! Each spot is packed with super fun stuff like slides, ball pits, pretend play areas, and cozy spots to explore! It's all here for you to have a blast and create amazing memories!

HOW TO CHOOSE A PRESCHOOL FOR YOUR CHILD

Selecting the right preschool for your little one can be quite a task, especially with the plethora of options available here in Chiang Mai. It's a thrilling moment as your child embarks on their educational journey, and I'm sure you share in their excitement. However, before the first day of preschool arrives, there's the crucial decision of which preschool to entrust with your child's early education.

Fortunately, living in Thailand offers the advantage of having excellent preschools scattered conveniently across neighborhoods, each presenting a diverse range of teaching methodologies and curricula. But for those navigating this decision for the first time, the abundance of choices can be a tad overwhelming.

If you're feeling a bit unsure about how to navigate this preschool selection process, worry not! We've put together a straightforward checklist to guide you along the way. Best of luck!

THE COMPLETE PRESCHOOL CHECKLIST

1. Duration of childcare service

Consider whether you need full-day or half-day childcare services for your child. Not all preschools provide full-day options, so it's crucial to find one that aligns with your childcare needs.

2. Your budget for school fees

Establishing a budget is essential when choosing a preschool in Thailand. While we all desire the best for our children, finding a preschool that fits your budget is crucial. Consistency in the learning environment is vital for your child's educational journey.

3. The preferred location

Depending on your daily arrangements, selecting a preschool close to home, your parents' or in-laws' place, or your workplace is a key consideration. Ideally, choose a location that makes drop-off and pick-up convenient during weekdays.

4. The learning experience you want for your child

Research the type of learning journey you want for your child. Look into teaching approaches, methodologies, and curricula that align with your child's individuality. For instance, schools following the Reggio Emilia approach may suit those valuing self-paced learning and self-expression.

5. Availability of bilingual programmes and the languages offered

If you're interested in your child learning multiple languages, seek preschools offering bilingual programs. Additionally, check the range of languages available, as some schools may offer more than just the typical English-Mandarin program.

6. The learning environment

As preschool is where your child spends a significant amount of time, ensure it offers a conducive learning environment. Whether you prefer a balance of indoor and outdoor learning or more emphasis on outdoor activities, confirm that the facilities meet your preferences.

7. Speak to the teachers

Teachers play a pivotal role in your child's learning journey. Attend virtual open days or visit the school to engage with teachers, understand their teaching styles, and observe how they interact with students.

8. Types of support services offered

Identify the support services available, tailored to your family's needs. Whether it's speech therapy, early intervention programs, or a support system like qualified counselors and parent groups, having the right support in place is invaluable.

Every school is unique – so choose one that suits your child best!

Remember, every preschool is unique, each with its educational philosophy and distinct strengths. When making your decision, focus not on the school with the best facilities or program, but rather the one that aligns most closely with your child's needs. Happy preschool hunting!

THE BENEFITS OF EARLY LEARNING FOR TODDLERS

Parents already know the deal, get your kids learning as early as possible to give them the best possible chance at life. 80% of your child's brain develops before the age of 4, and they are doing most of their learning before they even get to their first school years. We all want our kids to grow up prepared for life and confident, but how much of what is on offer is really worth your time and money? Should we be playing Mozart for our children in the womb? Studies say that that is probably pointless. Should we get our pre-schoolers into a stimulating, social, and fun playgroup or early learning classes? Absolutely!

SOCIAL AWARENESS

The benefits of socializing our children from a very early age are infinite and important. Interactions with other kids teach our little ones about empathy, cooperation, sharing, flexibility, kindness, consideration, assertiveness, confidence, tolerance, and unity.

As toddlers and pre-schoolers meet more people — young and old — they begin to develop a strong sense of self. They start to notice the differences and similarities

between themselves and others. Our little ones need to be able to compare themselves to others in order to challenge themselves and try new things. When your child sees an older kid in playgroup stomping their feet during a particularly enthusiastic rendition of "If You're Happy and You Know It," they will naturally want to copy them, and may challenge themselves to try new things and meet new goals.

Empathy is something professionals have become increasingly concerned with, as the prevalence of online screen time affects young people in ways we have never had to deal with as a society in the past. In the days before smart phones and omnipresent internet, we were all just a little bit more aware of how our actions affected others. When a child hurt another person, they were usually looking right at them. Whether it was a physical altercation, or some harsh words, children were forced to see the painful expression on the face of the person they hurt. That recognition of pain caused is missing when it comes to online bullying and negative social media interactions. This is just one reason that early socialization is important for raising, well-adjusted and kind little humans.

LANGUAGE DEVELOPMENT

Believe it or not, that unusually perky teacher in the front of the class is not singing the cleanup song for the 5th time for her own entertainment. Using transition songs and catchy tunes helps little ones develop language skills through musical cues. The songs, chants, and rhymes are repeated frequently and even parents can't help but sing along. The words of the songs might not come right away, but those little growing brains are soaking them up and beginning to recognize meanings and usage in context.

Children benefit tremendously from exposure to other languages and cultures, and as we raise our kids in this global world, they become internationally minded, develop tolerance, understanding of other cultures, and learn acceptance. Living in an international city like Bangkok means your little ones are blessed with the perfect opportunity to become bilingual very early. All studies show that learning other languages at a young age is nothing but beneficial to early childhood development.

The adult brain is made up of neurons, around 100 billion of them. Amazingly, babies are born with millions more. During a baby's first year these neurons rapidly develop trillions of connections (synapses) between themselves. Life experiences will activate certain neurons, and create new connections while unused connections will disappear. What parents do or don't do during these crucial years can have profound impact on a child. For example, learning a second language builds more synapses and, in turn, strengthens those parts of the brain, allowing children to learn even more languages as they grow up!

SELF CONFIDENCE

I am sure you have noticed that your early learner wants to read the same story over and over before bed. Perhaps you have been coerced into playing the Baby Shark video 30 times this week. There is more to this behavior of repetition than simple preferences. Your little one may love the groovy tunes of Baby Shark, but she also loves that she knows the words of the next verse.

Prediction is a huge key to self-confidence. When you turn that page in the story, and your child has remembered the line "Brown bear, brown bear, what do you see? I see a red bird looking at me" And they know there will be a red bird on the next page, that truth is confirmed for them, and their confidence surges. They were right and they love it!

Toddler and pre-school groups follow a repetitive structure, songs are repeated, stories are reread, words and vocabulary are used thematically throughout the lessons, and other props and materials encourage the littlest of little ones to make predictions and boost their courage and morale.

PARENT-CHILD BONDING

Being a parent is hard work. This is not news. Things get in the way of spending quality time with our kids. Life, work, siblings, phones, social lives, shopping, cleaning, and everything else we need to do every day can mean that sometimes we feel we are simply dragging our toddlers around with us while we go about our lives. This is normal and this is fine, but that's when playgroups and classes really help us out.

Spending an hour here or there with our child and no other distractions is so important and so valuable. Little ones love to see mommy and daddy participating in the things they enjoy, they adore showing their parents a piece of art they created or a lump of dough they squished into a particularly yummy noodle shape. Soon little ones will be off to school, so making the most of these early years will give you great insight into what they love, and who they are.

WHAT IS MONTESSORI EDUCATION?

Families are often curious about the Montessori Method of education, which is very popular around the globe. What is it exactly, and how does it foster a child's development, outlook and well-being?

OVERVIEW

In 1907, Maria Montessori, an Italian physician, opened her first school based on an educational model that places importance on natural child development, and the guiding of such growth through an environment that is conducive to the child's learning. Broadly speaking, the Montessori Method encompasses a holistic approach with the primary goal of helping each child reach their full potential in all areas of life. Activities promote the development of social skills, emotional growth and physical coordination, as well as cognitive preparation for future learning.

As there is a belief that children learn best by doing, Montessori classrooms are open environments equipped with 'didactic' materials, which involve sensory experiences. The children are free to pursue a range of activities and thus leverage their natural tendencies to learn; this later leads to reading, writing, advanced mathematics, problem solving, geography, science and cultural

studies. Visual arts, music and movement are interwoven throughout the days' activities.

Teachers play the roles of guide, demonstrating the use of learning materials, and observer, acting as a link between the children, suitable materials and their immediate surroundings.

Early childhood (3 to 6 years) classrooms are the most common age range found in Montessori schools but the curriculum can extend to primary and secondary levels. In Bangkok, there are several schools with either full or partial adoption of the Montessori approach at the pre-school and primary school levels; they are also either standalone institutions or part of a larger international school. These include Montessori Academy Bangkok International School, Modern Montessori International Pre-school, International Montessori Center, John Wyatt Montessori, Prep International Kindergarten and Ekamai International School.

A UNIQUE APPROACH

Montessori early childhood programmes foster the development of trust and assist in the natural development of the child. "Young learners up to

the age of five go through specific sensitive periods, where language, physical movement, order, refinement of the senses and social behaviour fall in critical periods of development," explains Serene Jiratanan, School Director and Principal of Montessori Academy Bangkok International School (MABIS), a trilingual (English, Mandarin and Thai) Montessori school. "We aim to develop these areas at their peak sensitivity phases, resulting in a child who displays a love for work, high level of concentration, self discipline and good social skills – these comprise the Montessori pedagogy."

At the heart of this approach is the freedom of students to "work" with authentic Montessori materials, including a range of quality, age-appropriate materials – objects such as wooden blocks, sand trays, textured fabrics and glass beads – for as long as they desire, alone or with others. All materials are designed to be self-teaching. Children learn to solve problems and see natural connections in knowledge and therefore, expand their imaginative thinking.

"The emphasis is on work," explains Serene. "The Montessori Method seeks to support the child in organisation, thus pretend play and opportunities to learn creatively from errors are less likely to be seen. Also, our Montessori classrooms consist of mixed age classrooms, giving students more opportunities to learn from one another." She adds, "We also focus on skills related to practical living as a foundation from which learning takes place, including establishing a sense of order, concentration, coordination, culture and independence. For younger children, the activities include simple tasks involved with care of self, care of plants and animals, basic motor skills and courtesy."

At the elementary level, Montessori frames the curriculum within imaginative and unifying stories called the Five Great Lessons, designed to ignite children's interest and excitement with a global vision of unfolding life and culture. These modules include The Story of the Universe, The Story of Life, The Coming of Humans, The Story of Communication and The Story of Numbers. The latter, for example, gets students to explore geometric concepts, including the relationship of lines; and build the decanomial, a visual of the commutative law of multiplication.

VARYING INTERPRETATIONS

When researching Montessori schools, parents may come across the mention of two main interpretations of the Montessori philosophy: Association Montessori Internationale (AMI) or American Montessori Society (AMS). Montessori-trained teachers should be credentialed by either of these two organisations.

AMI, established by Maria Montessori, closely adheres to the founder's original approach. In AMS schools, teachers continue the methods developed by Dr. Montessori while bringing in outside resources, such as the use of technology and introduction of current events, to supplement the curriculum. Parents can consider which interpretation of this experiential learning system more closely aligns with their personal educational beliefs.

REGGIO EMILIA APPROACH

As we continue with our focus on education, we explore Reggio Emilia, a unique concept in preschool and primary education. Under this approach, the child is an active participant in learning, and focus is placed on free inquiry as the basis of education. The approach also embraces the notion that teachers, parents, and children are equal and ongoing shareholders in the learning process. Learn more below.

WHAT IS IT EXACTLY?

Developed in the 1940s in an Italian city bearing the same name, the Reggio Emilia approach considers the child to be a competent protagonist and initiator who interacts with their environment. The child is both a learner and a guide. As children are believed to be “knowledge bearers”, they are encouraged to share their thoughts and ideas about everything they encounter or do during the day, granting them some control over the direction of their learning. Also, the Reggio approach

believes that kids must be able to learn through the experiences of touching, moving, listening, seeing, and hearing; forming relationships with other children; and having endless opportunities to express themselves.

While the teacher facilitates the learning, he or she is also a learner. In other words, the teacher observes how a particular child acquires information and knowledge, and gains a better understanding how that child learns. The teacher then structures a more individualized curriculum and environment.

The Reggio approach shares some values with the better-known Montessori method, but it is not a philosophy with a set system of beliefs. Instead, its ideas can be incorporated into any teaching model to enhance an already existing programme. Today, the approach has spread into a worldwide network of preschools, kindergartens, and elementary school classes.

WHAT SORT OF CURRICULUM IS INVOLVED?

Each school term or year will focus on a particular project. Often, brainstorming by the individual child or the class initiates a topic. The curriculum is then developed around this particular topic, evolving into a hands-on, multi-dimensional project. Emphasis is placed on learning from new situations that present themselves and from schema (a multi-faceted perceptual model), rather than the isolated presentation of facts and information memorization. Children also reinforce math, problem solving, and emerging literacy skills in relation to their project.

HOW ARE PARENTS INVOLVED?

The Reggio approach views the parent as an essential resource for the child’s learning both at the school-wide and classroom levels. Schools will thus foster their own communities, and parents are expected to take part in discussions about school policy, child development concerns, and curriculum planning and evaluation.

WHAT ARE THE ENVIRONMENTS LIKE?

The environment of the Reggio school is considered to be the “third educator”, after the teacher and parent. Schools are visually pleasing, with lots of natural displays, earthy hues, and calm environments. Most classrooms also include a studio, or “atelier,” which is equipped with materials such as clay, paint, and writing implements, among others. Children use these materials to represent concepts that they are learning in a hands-on way.

Also, learning is visible at Reggio schools. Documentation is important — the teacher observes and uses a variety of methods, such as cameras, tape recorders, and journals, to track children’s thoughts and ideas as they play or work with materials. For example, parents may see photos of a work in progress on the classroom wall, accompanied by quotes and artwork from the children, which allows them to readily understand what their child learns at school. Children also gain a sense of pride from seeing such validation of their work. In essence, the environment becomes one means of evaluation.

One thing to note is that unlike ‘Montessori’, there aren’t organizations or agencies that certify a school as a ‘Reggio school.’ Identifying as Reggio-inspired schools holds the educators accountable develop their environments and curriculum according to the approach to learning.

WALDORF EDUCATION IN BANGKOK

What is Waldorf education, schools and their mission and what makes it different from other learning philosophies? Many people have started to look at the Waldorf approaches to learning and many have absolutely no idea what it is. Let's discover exactly what it is so you can decide if this is the right fit for your child.

Waldorf education is based on the educational philosophy of Rudolf Steiner (strange it's called Waldorf education!) and its approach is a spiritual philosophy known as 'Anthroposophy' which is the understanding of a humans true nature from infancy to adulthood. The teaching method strives to develop pupils' intellectual, artistic, and practical skills in an integrated and holistic manner by educating children through games and music. This is a movement in education that seeks to engage all aspects of the learner, including mind, body, and spirit to help children develop social, emotional and intellectual skills. Waldorf methods aim is to cultivate pupils' imagination and creativity in ways that serve their developmental needs. Academics are not considered as the main priority in the early years and Waldorf preschools are not obsessed with teaching reading and writing, they focus more on developmental milestones so each child learns and progresses at a pace that is appropriate to them rather than competing with others.

HISTORY OF THE WALDORF EDUCATION

The Waldorf method is nearly a century old and was originally founded in the early 20th century by Emil Molt, the owner of Waldorf Astoria cigarette factory in Stuttgart, Germany. The schools were originally established for his employees' children and the foundations were based on the philosophy of learning developed by Rudolf Steiner, a scientist, literary and philosophical scholar. The curriculum is based on human beings, comprising of body, soul and spirit. It success speaks for itself as it is considered the fastest growing holistic schooling system in the world, with more than 500 centers for special education, 1,200 independent schools and over 2,000 kindergartens globally. At the time of writing there are only a handful of Waldorf schools in Thailand. Germany, the United States and the Netherlands are the countries which host the most Waldorf schools. They strive to create morally responsible individuals with high social competence.

A WALDORF CLASSROOM

In the typical Waldorf classroom subjects such as literature, art, theatre, dance are 'experienced' and not just learnt. A Waldorf teachers' role is to

generate inner enthusiasm for learning and therefore removing the need for competition and exams. A students motivation to learn is intrinsic in the philosophy of the schools. Teachers aim to encourage and trigger students cognitive thinking skills (head), their social and emotional abilities (heart) and their physical development (hands) in age appropriate ways. Learning in many subjects is focused on learning through creative tasks. It's more common to see pens, paper, paints, sand and blocks rather than computers, in fact some Waldorf schools don't even allow them in the classrooms with the fear they inhibit creative thinking.

HOW WILL THEY ASSESS MY CHILD

In Waldorf education the assessments of students work is integrated into the daily life of the classroom and allows teachers to frequently check their learners' progress and the effectiveness of their own practice which allows for self assessment of the student. Standardised testing will be limited to entry requirements for further secondary education.

One thing to understand is that individual teachers and schools have a great deal of autonomy in determining the curriculum content, the way they teach and the governance of the schools. Assessments both formal and informal are conducted by teachers during the learning process in order to modify their teaching and learning activities to improve the student's engagement and grades. The goal of a formative assessment is to monitor student learning to provide ongoing feedback that can help students identify their strengths and weaknesses and target areas that need work. It also helps faculty recognize where students are struggling and address problems immediately. This typically involves qualitative feedback (rather than scores) for both students and teachers so they can focus together on the details of content and performance.

This type of assessments are contrasted with more summative assessments which mainly seek to monitor standards of education and give a final report on the students achievements at the end of a course or module.

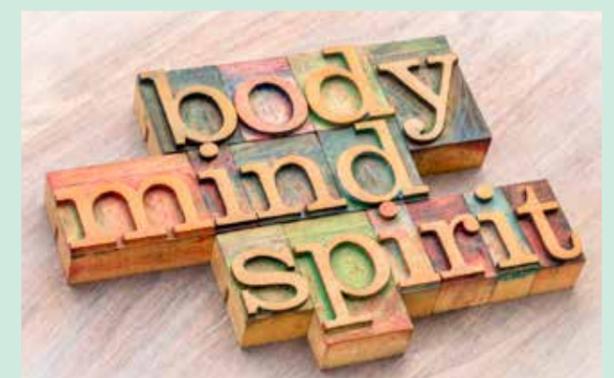

5 THINGS TO CONSIDER

Waldorf schools have guiding principles but there is no hard and fast rules on how each school or teacher interprets them. You can expect to see many different interpretations on how each individual school puts the principals into action across the thousands of schools in existence. Waldorf schools create non academic environments so children will help to prepare and serve food, tidy materials away and keep their work spaces clean. The idea is that the children, through doing such tasks learn to appreciate the things that are done for them in life.

Storytelling plays an important part of classrooms and in daily life and true Waldorf teachers will tell stories 'by heart' and not from a book, in the way that myths, legends and fables would be told around a camp fire. Eye contact and recounting a story adds realism for the listener and helps stories come alive.

The arts are incorporated into all subject areas from spelling, to history and maths. The theory is that if children are fully engaged in a creative activity and expressing themselves individually then they are far more likely to enjoy and remember the subject matter. The theory of incorporating art throughout learning actually runs much deeper on a neurological level and there is substantial evidence to support its use.

There are no text books used in Waldorf schools. The idea in Waldorf is that the children make their own books, no too dissimilar to some Reggio settings, based on project work that they do.

WHAT EXACTLY IS FOREST SCHOOLING?

Research now confirms what forest school educators have known all along; that kids are stimulated by being surrounded by nature and the positive effects that learning outdoors has on their early childhood development. The benefits of this unique style of education are endless and include, increased confidence, problem solving abilities, critical thinking skills in relation to risk assessment and most importantly, their emotional well-being.

In our modern world, kids are bound by a system of targets and assessments. Forest Schools that originated in Denmark offer educational programmes which are different from any other teaching system in that they place the child at the centre of everything they do as a model for progressive education. They are a form of outdoor education that is particularly associated with the early years where young children spend time outside in the forest or natural outdoor settings. They have the knowledge and experience to transform the lives of children by re-engaging their deepest inner instincts with our living planet.

WHAT WILL MY CHILD LEARN AT FOREST SCHOOLS?

Forest schooling is an outdoor education model in which students visit natural spaces to learn personal, social, technical skills and how to manage risks in an outdoor setting. The core of the program reflects an inspirational process that offers all learners regular opportunities to achieve and develop confidence and self-esteem through hands-on learning experiences in a woodland or natural environment with trees. Forest schools seek to encourage, motivate, engage and inspire children in a nature filled environment.

“Growing research has been showing the importance of play outside the classroom; in a purposeful and challenging environment, this provides essential learning opportunities for children,” explains Parityada Punthapong, Co-founder and Director of Outdoor School Bangkok. “Parents or caregivers can deny

children the opportunity for learning and development in outdoor play, replacing it with the fear of what might go wrong. For some children this can create risks itself, with children making the wrong decisions as a result of insufficient experience of managing risk.”

Some of the activities offered at Bangkok Forest include natural and open-ended resources, sensory play, den building, pond dipping, bug hunting as well as a variety of art and craft activities, singing and story time.

WHAT SKILLS WILL MY CHILD DEVELOP?

The forest school philosophy is not to eliminate risks children take but to learn to minimise risks as some levels of risk are important for child development. Risks improve and develop confidence and when children are exposed to new and unique challenges in natural outdoor environments it help to expand their horizons. The more children learn to take risks, the more skills they develop to evaluate risky situations. Forest schools which are mainly based outdoors encourage physical activity and exercise which then becomes accepted as a natural part of everyday activities.

Whilst some educational specialists express concern over outdoor learning in all weather conditions, forest school students learn that they can play through any weather conditions and that life and the environment is a delicate balance of seasons. This encourages them to develop a sense of resilience and the importance of concepts like protecting natural habitats and taking climate change seriously. Naturally teachers always put the

safety of the students first and extreme conditions like high winds which could cause injury are assessed and then avoided where necessary.

As learning is play based and child initiated, the learning encourages creativity, spontaneity and authentic peer communication skills where each child can experience being a leader in their own unique experiences. As students spend so much of their day outside they learn to navigate fires, sticks and safety around knives and subsequently become competent with these dangers early on. They learn how to cook and forage, the importance of the balance of eco systems and food chains and to become reflective learners by trial and error in safe natural settings where learning occurs in context.

As forest schools are expanding globally it has changed to match the contexts of different countries, a forest school in Thailand will look very different from similar schools in Australia and each school will have a strong emphasis on connecting to their homeland.

For parents who want their children to grow up amongst nature with an uncorrupted and technology free life, these schools offer a great start to early years education, which will encourage a life long connection to nature.

Firefly Forest school in Bangkok are currently the only school in Bangkok offering a full forest school education.

DEVELOPING EARLY READING SKILLS

Supporting your child in their quest to unravel the mystery of reading has to be one of the most exciting, yet utterly daunting tasks of parenting.

Parents of young children are often bombarded with vast amounts of educational propaganda. Most of it serves, not to illuminate, but rather to bewilder and scare. The aim of such literature, it appears, is to make us feel that if our child has not been adequately prepared for the rigors of reading before they enter school —usually by buying a certain product— then you might as well sentence them to a life of educational misery and low self-esteem.

But fear not....

THE TECHNICAL SKILLS

While mystifying us with detailed descriptions of phonemes, diphthongs and phonic blends, these carefully marketed volumes often fail to mention a very basic fact: Those children most likely to succeed in learning to read are those who, first and foremost, love books.

Of course, this is not to undermine the value of learning the technical skills that let us, borrowing an educational phrase, to “decoding the text.” Just the opposite: It is because these skills can seem so complex, that in order to succeed one must have an overwhelming desire to continue trying even when the going gets tough!

Using external rewards such as praise, stickers and even bribery may motivate a child for a while, but the persistence necessary for success requires internal motivation.

CRITICAL FACTORS FOR READING

Over years of research, scientists and educators have identified five critical factors for reading, including phonological awareness, phonics or word recognition, fluency, vocabulary and comprehension. Students must develop competency in all such areas, with teachers emphasising them in lessons.

Phonological Awareness

Phonological and phonemic awareness refer to the ability to perceive, segment, blend, and otherwise manipulate sounds, particularly the sounds of language. Research has demonstrated that this competency is required for effective phonics instruction. If students have difficulty in perceiving and manipulating language sounds, they will be challenged when those language sounds become associated with written letters as in phonics.

Phonics or Word Recognition

Phonics or word recognition refers to the ability of readers to produce the oral representation of a written word using, primarily, the sound symbol representation of letters and letter combinations.

Fluency

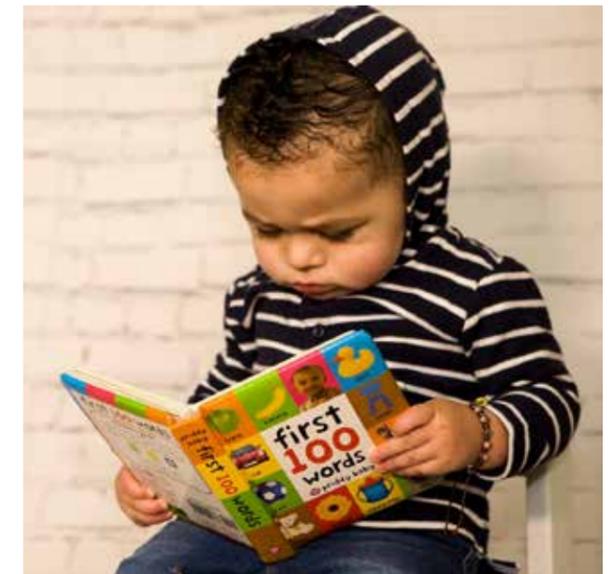

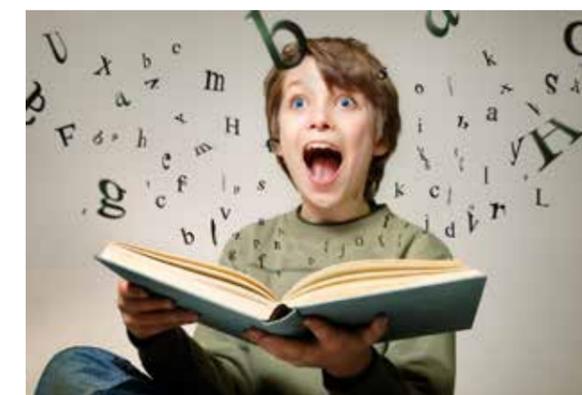

Fluency is the ability to produce the oral representation of written words effortlessly so that readers can direct their attention to the meaning of the text. Fluency also includes the ability to read with appropriate expression that reflects and enhances the meaning of the written text.

Vocabulary

Like phonics, vocabulary refers to competency with words. However, vocabulary deals with the meaning of the oral and written words rather than the ability to “sound out” words. Clearly, comprehension is not possible if readers do not know the meaning of words, even if they can sound them out correctly.

Comprehension

Finally, comprehension refers to the ability of readers to gain meaning from a written text. Comprehension is the ultimate goal of reading and requires meaning-making effort and strategies on the part of the reader.

ENCOURAGE CURIOSITY IN READING

So how do we encourage our children to develop an insatiable desire to learn to read? The simple answer is curiosity. We want them to need to know what is going to happen next! However, for this to happen they first need to understand that there is an interesting ‘next’ to know about! This revelation may be viewed as both a relief and yet another puzzle for parents. Exactly how can we stimulate in our children this curiosity and love for reading?

The answer has to be related to loving books themselves. For some of us this might not be a problem, but for any parent who for whatever reason are reluctant readers, this may be quite a frightening revelation.

The fact of the matter is that, to produce a reading lover it is enough to show them that we love reading with them! A few minutes spent in a comfy chair reading with your child can do wonders to set them up for the exciting world of reading. Reading reward charts can often be a fun and creative way to chart your child’s reading progress and set goals for them to personally achieve.

To enhance the adult reading experience with children, consider these tips: Choose books you personally enjoy before committing, as children often prefer repeated readings. When a story becomes tedious, playfully alter some words to add a fresh twist. Create personalized books with your child using photos or drawings to foster a connection with characters. Dedicate focused reading time to convey the value of the activity. Avoid comparing your child’s progress to others, and if concerns arise, consult their teacher. Relax, enjoy shared stories, and let reading be a positive experience for your child’s development.

THE THIRD TEACHER: INNOVATIVELY DESIGNED LEARNING SPACES

Courtesy of Sophie Wilson, Academic Director at The Apple Tree International Kindergarten

In early years settings, creating an inspiring and nurturing learning environment is of paramount importance. Educators understand the significance of a well-designed classroom that not only stimulates young minds but also serves as a “third teacher.” The Reggio Emilia approach, which originated in Reggio Emilia, Italy, places a strong emphasis on the classroom environment as an essential component of early childhood education.

The approach, developed by Loris Malaguzzi, is rooted in the belief that children are active learners who construct knowledge through their interactions with their environment and peers. This philosophy recognizes the significance of the classroom environment in shaping the learning experience. It views the environment as an essential component, alongside the child and the teacher, in the

educational journey. In this approach, the classroom is considered the “third teacher” because of its influential role in guiding and facilitating learning.

As we continue to explore and refine early childhood education practices, the Reggio Emilia approach serves as an inspiring model that highlights the potential of the classroom as a catalyst for growth and discovery in the early years. At The Apple Tree International Kindergarten we follow the Reggio Emilia approach to teaching and learning and consider the environment as the third teacher. The concept of the learning environment as the “third teacher” encourages educators to create spaces that are rich in possibilities for exploration, discovery, and communication. Here are the key principles we follow when designing our learning spaces:

Aesthetic Beauty: The classroom environment should be aesthetically pleasing, invoking a sense of wonder and curiosity in young learners. The use of natural materials, soft colors, and an organized layout can help create a visually appealing space.

Flexibility: Learning spaces should be adaptable to accommodate various activities and group sizes. This flexibility allows children to engage in different learning experiences and fosters a sense of agency and choice in their educational journey.

Documentation: The walls of the classroom serve as a canvas for documenting children’s thoughts, ideas, and processes. Visual displays of their work, photographs, and written reflections provide opportunities for children to revisit and build upon their learning.

Natural Elements: Incorporating nature into the classroom environment can stimulate curiosity and a connection to the natural world. Plants, natural light, and open-ended materials like sand and water tables can enhance the learning experience.

Order and Organization: A well-organized classroom promotes a sense of calm and security. Children can easily locate materials and resources, fostering independence and self-regulation.

Embracing the Reggio Emilia approach and treating the classroom as the third teacher has significant implications for holistic development in early years settings.

Cognitive Development: Our carefully designed environment encourages children to explore, question, and problem-solve. This fosters critical thinking skills, creativity, and a deep understanding of concepts.

Social and Emotional Development: The classroom as the third teacher supports the development of social skills, empathy, and emotional intelligence. Collaboration, communication, and the opportunity to express oneself through various mediums contribute to well-rounded social and emotional growth.

Language and Communication: Our learning environment encourages language development as children engage in dialogue, storytelling, and the interpretation of visual displays. It promotes communication skills, listening, and expression.

Independence and Agency: The flexible and organized classroom environment empowers children to make choices and decisions. This builds a sense of independence and agency in their learning journey.

At The Apple Tree International Kindergarten, the classroom environment is not just a physical space; it's a dynamic partner in the educational process. By recognizing it as the "third teacher," we can harness the power of design, aesthetics, and flexibility to create a nurturing and stimulating environment that enhances cognitive, social, emotional, and language development in our young learners.

GUARDIAN VISA FOR PARENTS WITH KIDS STUDYING IN THAILAND

Courtesy of Chris Larkin

The whole visa situation here in Thailand is quite a minefield to navigate and with different types of visas available, it's always best to check directly with the Thai immigration for the exact requirements relating to each visa type according to your own individual situation.

If you are moving to Thailand based on one of the parents working for a Thai based company, then it is highly likely that all family members will have their visa's connected as dependents of the working parent. However there are certain situations where being a dependent isn't possible.

What happens when things are not straight forward?

- What if you want to locate yourself in Thailand given the educational options for the children, but the main breadwinner technically works for a company outside of Thailand performing a regional role?

- What if you and your working partner are in a de-facto relationship, in which case the Thai government will not issue the non-working partner with a dependent visa but the parent wants to move to, or remain in Thailand to support the child's education?

- What if your partner leaves Thailand on a new posting but you wish to remain so your child can complete their schooling?

The good news is that if your situation changes while living in Thailand and your kids need to finish school or you want to stay in Thailand based on their educational status, there is a Guardian Visa that covers you specifically for this purpose.

In this case, guardian visas are available to parents of children studying in formally recognised schools. Your children will need to obtain a 'Non-Immigrant ED' (education) visa which will be

granted based on the school confirming enrollment. The education visa is a fairly straightforward process and all schools can supply you with the documentation to confirm your child's place at school.

Many schools offer a visa service where one of their representatives will take you and your kids to the immigration office to assist in the process. Do check in advance though as while some are complimentary, others offer a paid service.

Should you wish to organise your own visas, the main Thai immigration office is based in Chaeng-wattana and has English speaking officers to assist and guide you in the right direction. Whilst you may have to spend the whole day there, taking the kids is necessary to obtain their visa as you cannot do this on their behalf, it is a straightforward process as long as you have all the correct documentation required and unlimited photocopies of your passport and entrance visa!

Following this, the parent of the child will be able to apply for a 'Non-Immigrant O' visa based on being the guardian of a student studying in Thailand.

While any reputable international school will provide you with the appropriate paperwork for this, there are two main things to know.

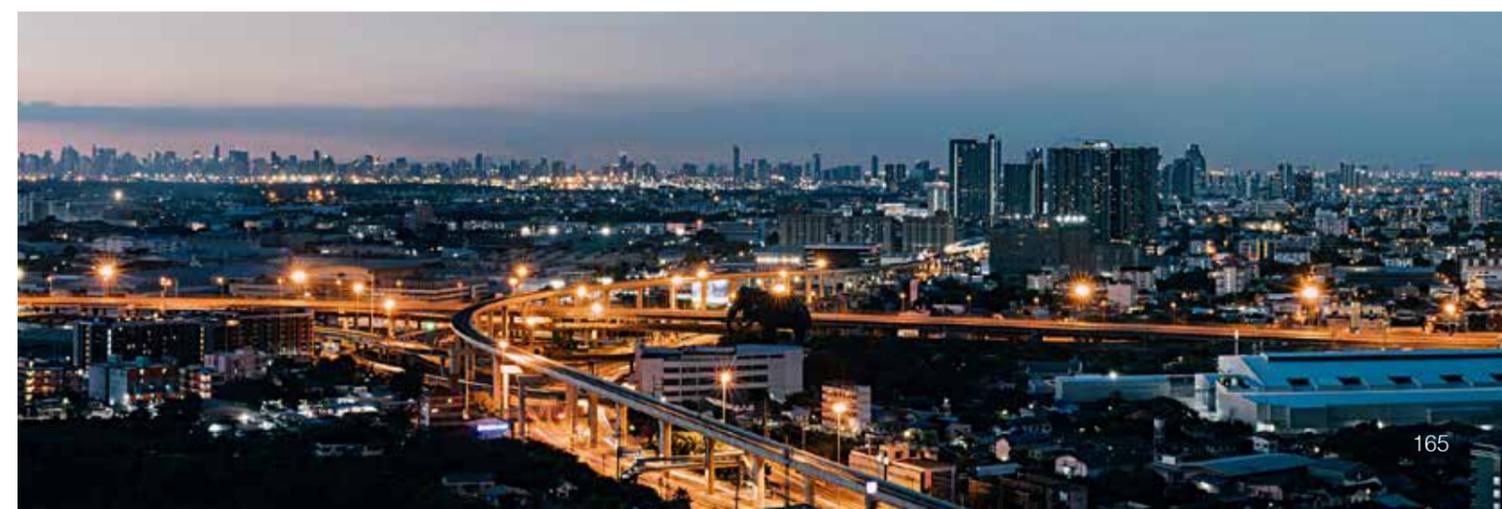

First, is that it requires 500,000 baht to be deposited in a Thai bank account in your name upon application. The money can be withdrawn after your visa is in place but must be put back into your account 3 months before the annual extension of your next visa application.

The second important thing to note is that only one Guardian visa is given for each child. So, if both parents require a Guardian visa, they will need to have at least two children studying in Thailand, and each Guardian visa will require 500,000 baht (i.e. 1

million baht in total) to be deposited in a Thai bank account in your respective names. However, in the case of one parent wishing to remain in Thailand to see two or more children through their education the guardian visa permits this.

Chris Larkin is a senior consultant and a long-time resident of Bangkok. His website www.thaicitizenship.com has some useful tips for those looking to stay in Thailand permanently.

Together We Flourish

Setting Foundation with Premium British Education

Embracing a legacy that spans more than 470 years, Shrewsbury has passionately nurtured personal growth within a dynamic, vibrant and caring community. A Shrewsbury education is rooted in a rich tradition, enduring in its relevance and forward-looking in its outlook.
